Research Data Management and Sharing

About this course: This course will provide learners with an introduction to research data management and sharing. After completing this course, learners will understand the diversity of data and their management needs across the research data lifecycle, be able to identify the components of good data management plans, and be familiar with best practices for working with data including the organization.

Ratings and Reviews

Rated 4.5 out of 5 of 71 ratings

informative course. Lots of information provided.
Course set a foundation of knowledge that will be built upon.
Good instructors. Good pace.

Great course, the instructors were clear and concise. I had zero knowledge of DM before this course and this course show the basics and essential at least to start to talk about data management. Absolutely indispensable to anyone doing research of any type. Kudos to the teachers!

I thoroughly enjoyed this course. It was well-taught and easy to follow. It covered many aspects of data management that researchers might forget to take into consideration as they begin their research. As someone who is interested in Library Science, I found this course incredibly informative and interesting.
