

RESEARCH DATA ALLIANCE

RDA Global Adoption week

15 - 19 June 2020

RDA #AdoptionWeek @resdatall

Objective

- RDA Global Adoption week aims to **demonstrate the wide variety of RDA adoptable and adopted solutions to data sharing challenges** that people in the field encounter in their daily jobs.

RDA #AdoptionWeek @resdatall

Purpose of the week:

- Learn about RDA Outputs
- Converse with speakers from all around the world who have created and implemented them
- Determine how best to integrate those data sharing solutions into your own projects

Monday 15th June

14:00 UTC

Data Management

Develop best practices and tools for non-static, machine-readable data management plans which can evolve throughout the research data lifecycle, as well as be machine-readable by collaborators and stored with the data.

- [RDA DMP Common Standard for Machine-actionable Data Management Plans](#) - Tomasz Miksa (TU Wien)
- **SEAGrid Science Gateway: Adoption of the PID Kernel Information and Data Type Registry Utilizing the E-RPID Testbed toward FAIR Scientific Workflows** - Rob Quick (Indiana University)
- [23 Things Revisited: Field guides to research data management, an adoption project](#) - Mijke Jetten, Cees Hof (LCRDm task group)

Recommendations & Outputs Catalogue short-link: <https://bit.ly/2UhOxyH>

Monday 15th June

23:00 UTC

Data Management

Develop best practices and tools for non-static, machine-readable data management plans which can evolve throughout the research data lifecycle, as well as be machine-readable by collaborators and stored with the data.

- **[RDA DMP Common Standard for Machine-actionable Data Management Plans](#)** - Peter Neish (University of Melbourne)
- **SEAGrid Science Gateway: Adoption of the PID Kernel Information and Data Type Registry Utilizing the E-RPID Testbed toward FAIR Scientific Workflows** - Rob Quick (Indiana University)
- **[23 Things Revisited: Field guides to research data management , an adoption project](#)** - Cees Hof, Margriet Miedema (LCRDM task group)

Machine-actionable Data Management Plans

Tomasz Miksa
RDA Austria
tmiksa@sba-research.org

DMPs currently

› Shortcomings of existing DMPs

- › manually completed, vague, not updated, considered bureaucracy, completed last minute, ...

	Data Officer	Who is responsible for the data management and the DMP of the project (name/email address)?
I	Data Characteristics	
I.1	Description of the data	What kinds of data/source code will be generated or reused (type, format, volume)? How will the research data be generated and which methods will be used? How will you structure the data and handle versioning? Who is the target audience?
II	Documentation and Metadata	
II.1	Metadata standards	What metadata standards (if any) will be in use and why? (see Digital Curation Centre)
II.2	Documentation of data	What information is needed for the data to be findable, accessible, interoperable and re-usable (FAIR) in the future? Is the data machine-readable? How are you planning to document this information?
II.3	Data quality control	What quality assurance processes will you adopt? How will the consistency and quality of data collection be controlled and documented? (This may include processes such as repeat samples or measurements, standardised data capture, peer review of data or representation with controlled vocabularies.)
III	Data Availability and Storage	
III.1	Data sharing strategy	How and when will the data be shared and made accessible? What repository will you be using? What persistent identifier will be used?
III.2	Data storage strategy	What data are to be preserved for the long-term, and what data will not be stored? How and where will the data be stored and backed up during the research? How and where will the data be stored after the project ends? For how long will the data be stored? Are there any costs that need to be covered for storage? At what point during or after the project will the data be stored? Are there any technical barriers to making the research data fully or partially accessible?

Data Management Plans

How to discover these tools?
Which one do I need to use?
Why do I have to provide the same information
again?

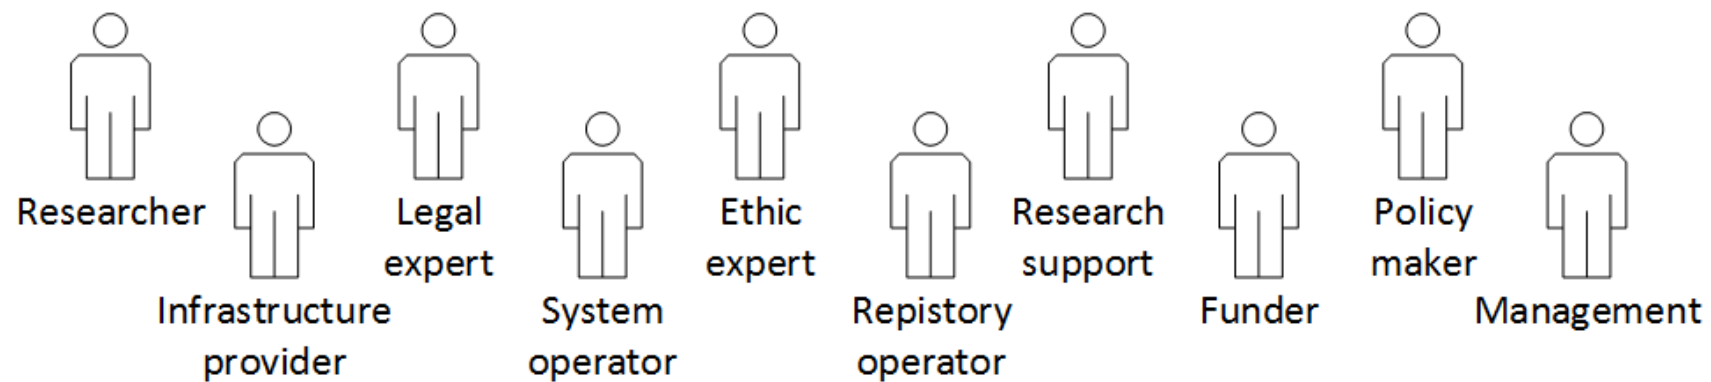

Why haven't they consulted us before?
Who is going to pay for this?
We don't have enough people for that!

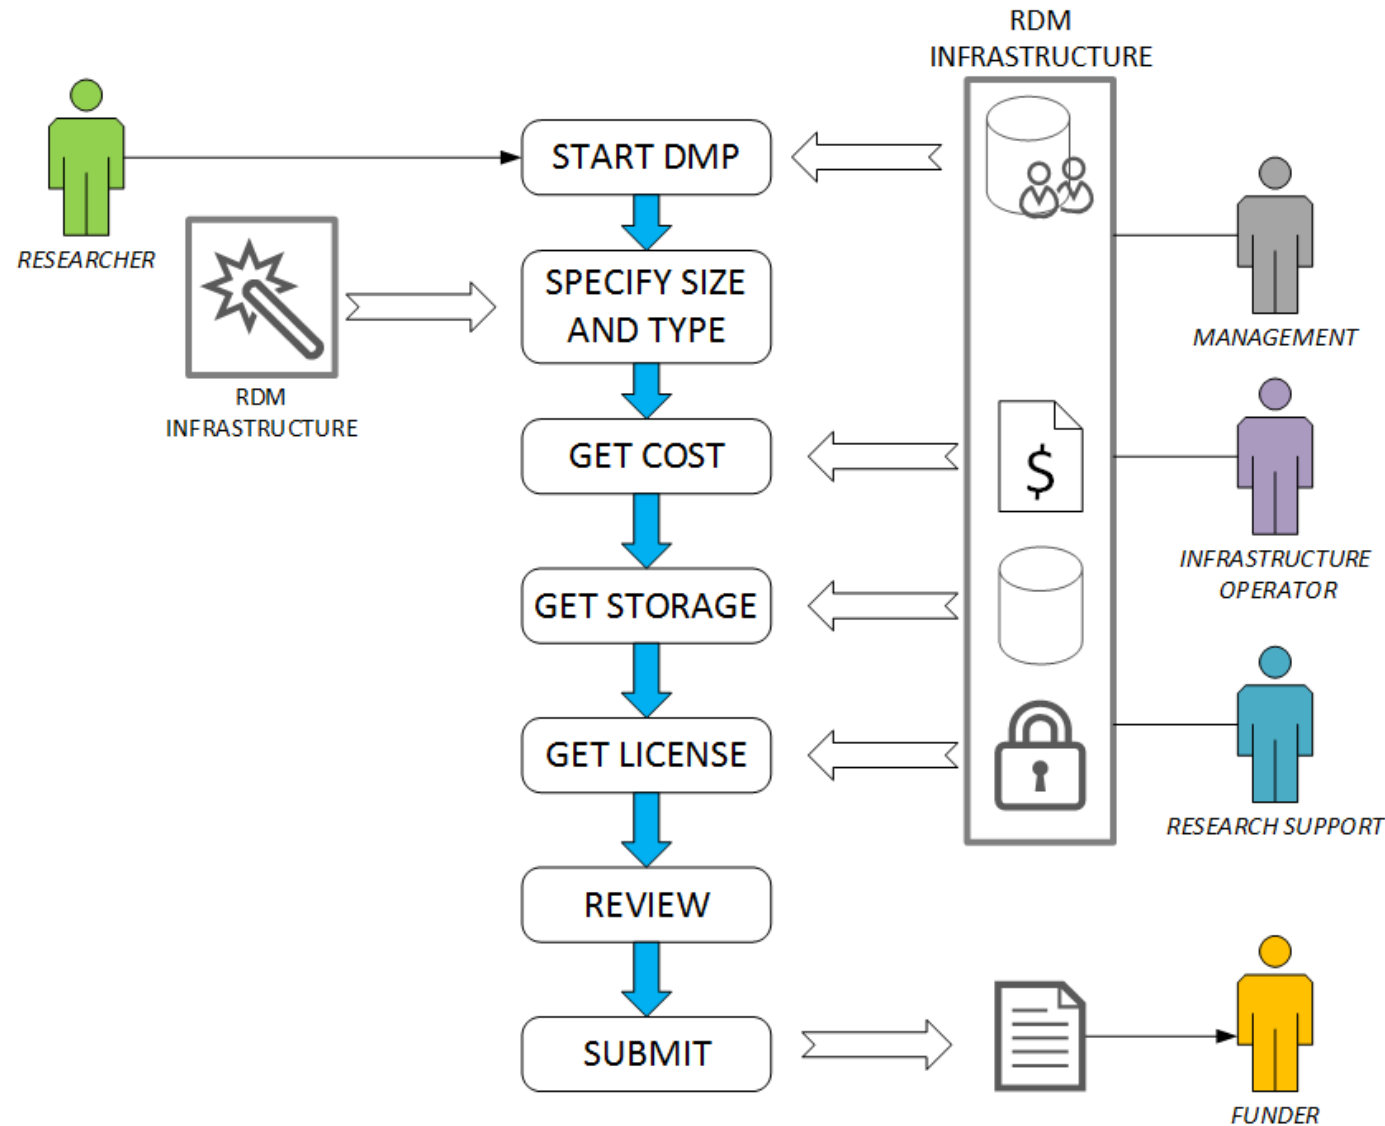

Research data lifecycle

- › Stakeholders involved in research data management
 - › require information at certain stages
 - › can provide information if requested at a proper stage
- › Many problems can be avoided when
 - › timing is right
 - › information flow is ensured

Automated Data Management Workflow

Machine actionable DMPs

- › living documents
- › automate data management
 - › collect information from systems
 - › trigger actions in systems
- › facilitate validation

- › This requires
 - › well-defined RDM workflows
 - › data management infrastructure
 - › common data model

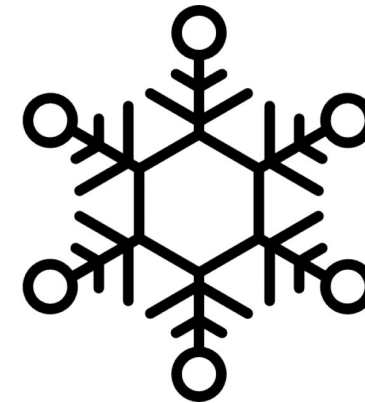

DMP Common Standards - Outputs

➤ **Common standard for machine-actionable DMPs**

- to model information from standard DMPs
- NOT a template
- NOT a questionnaire
- modular design
 - core set of elements
 - domain specific extensions

➤ **Reference implementations**

- ready to use models
 - JSON, RDF, etc.

Example

- Current DMPs – model questionnaires

<administrative_data>

<question>Who will be the Principle Investigator?</question>

<answer>The PI will be John Smith from our university.</answer>

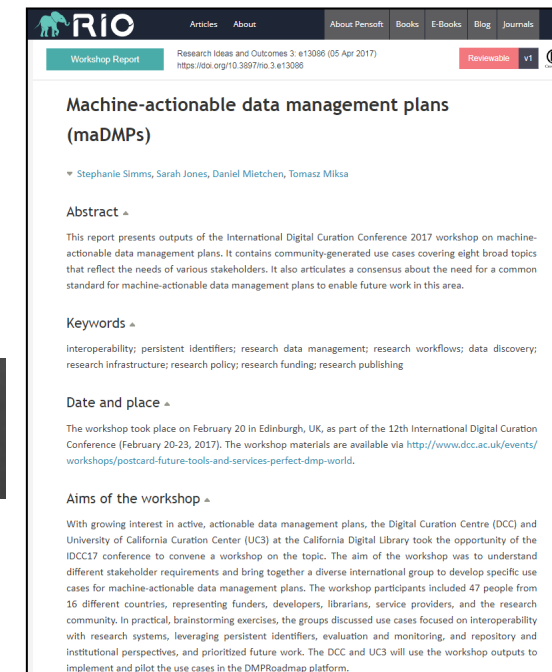

</administrative_data>

- Machine-actionable DMPs – model information

```
"dc:creator":[ {  
  "foaf:name":"John Smith",  
  "@id":"orcid.org/0000-1111-2222-3333",  
  "foaf:mbox":"mailto:jsmith@tuwien.ac.at",  
  "madmp:institution":" AT-Vienna-University-of-Technology"  
}],
```

DMP Common Standards WG

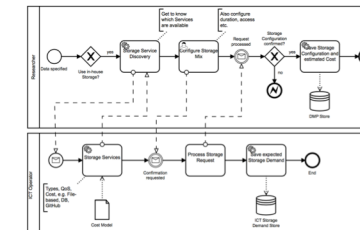

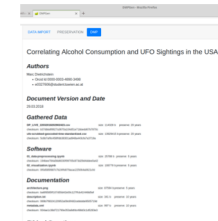

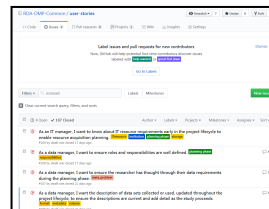

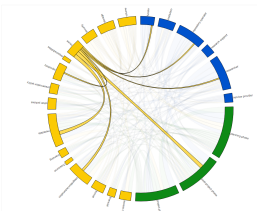

- › Launched in October 2017
- › Result of a consultation made by Active DMPs IG
- › Focus on machine-actionable DMPs
- › 200 members from all continents
- › DMP tool owners are part of it

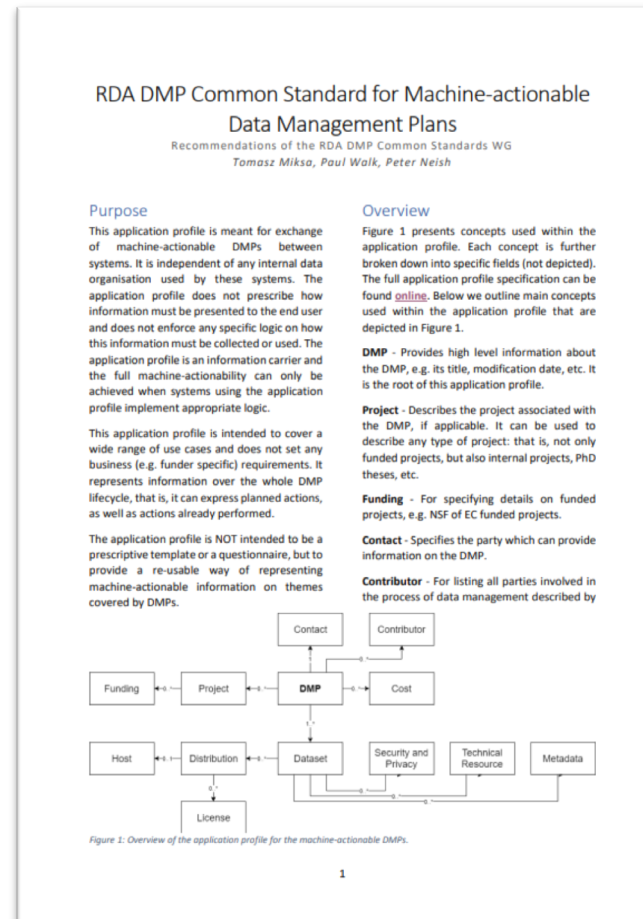

<https://doi.org/10.3897/rio.3.e13086>

Summary of actions till now

- 1st consultation (user stories) went broad
 - to define scope of maDMPs
- 2nd consultation went deep
 - to identify models for specific requirements
- Proof of concept tools
 - to demonstrate how model can be used to automate tasks
- BPMN processes
 - to identify systems and stakeholders involved
- Model development

Miksa, T., Walk, P., & Neish, P. (2019). RDA DMP Common Standard for Machine-actionable Data Management Plans.
<https://doi.org/10.15497/rda00039>

Model - documentation

Properties in 'contact'

Name	Description	Data Type	Cardinality	Example Value
contact_id	Identifier for a contact person	String	Exactly One	http://orcid.org/0000-0000-0000-0000
mail	E-mail address	String	Exactly One	cc@example.com
name	Name of the contact person	String	Exactly One	Charlie Chaplin

Properties in 'cost'

Name	Description	Data Type	Cardinality	Example Value
currency_code	Allowed values defined by ISO 4217.	Term from Controlled Vocabulary	Zero or One	EUR
description	Description	String	Zero or One	Costs for maintaining....
title	Title	String	Exactly One	Storage and backup
type	Type	Term from Controlled Vocabulary	Zero or One	
value	Value	Number	Zero or One	1000

TAB Liaison: Jane Wyngaard
Case Statement: [Download](#)
 IG Established

The proposed activity of this group is to act as a nucleus for discussing requirements for and identifying developments needed to support active (i.e. able to evolve and be monitored) data management planning. Working groups will be proposed to carry out work on specific areas of interest. Currently research data management plans (DMP), created at the proposal stage of a project, do not evolve and cannot be monitored in any detail. The DMP should begin at the planning stage for any dataset evolving through its entire lifecycle and is therefore fundamental to ensuring that data is appropriately

Adopt RDA recommendations!

Adoption Stories

[Home](#) » [Recommendations & Outputs](#) » [Adoption Stories](#)

The Research Data Alliance (RDA) currently hosts over 60 Interest Groups and more than 30 Working Groups consisting of experts who are working on various topics related to (open) research data and innovation. These working groups produce the RDA outputs: the technical and social infrastructure solutions enabling data sharing, exchange, and interoperability.

For you, to see how to implement the RDA outputs to improve the sharing, exchange and interoperability of your own data, we've asked RDA members who have already adopted RDA outputs, to share their experience and lessons learned in a story. Find below a series of RDA adoption stories by individuals, organisations and projects.

Questions?

Toward FAIR Data Workflows with SEAGrid and RPID

Rob Quick, Yu Luo, and Guangchen Ruan
Cyberinfrastructure Integration Research Center
Pervasive Technology Institute
Indiana University
rquick@iu.edu

Scenarios

- Researcher uses a Science Gateway to do research
 - They are concerned the digital objects they use and produce are aligned with FAIR principles
 - They want the research to be reproducible beyond the Science Gateway environment
 - Share the steps used (not just the data) to calculate the results simply and easily within a publication or with collaborators
 - Reuse a workflow with 'tweaks' without having to recreate the entire computational workflow

FAIR PRINCIPLES

Findable

- F1. (meta)data are assigned a globally unique and persistent identifier;
- F2. data are described with rich metadata
- F3. metadata clearly and explicitly include the identifier of the data it describes;
- F4. (meta)data are registered or indexed in a searchable resource;

Interoperable

- I1. (meta)data use a formal, accessible, shared and broadly applicable language for knowledge representation;
- I2. (meta)data use vocabularies that follow FAIR principles;
- I3. (meta)data include qualified references to other (meta)data;

Accessible

- A1. (meta)data are retrievable by their identifier using a standardised communications protocol;
 - A1.1. the protocol is open, free and universally implementable;
 - A1.2. the protocol allows for an authentication and authorisation procedure, where necessary;
- A2. Metadata are accessible, even when the data are no longer available;

Reusable

- R1. (meta)data are richly described with a plurality of accurate and relevant attributes;
 - R1.1. (meta)data are released with a clear and accessible data usage license;
 - R1.2. (meta)data are associated with detailed provenance;
 - R1.3. (meta)data meet domain-relevant community standards;

Slide provided by
Luiz Bonino

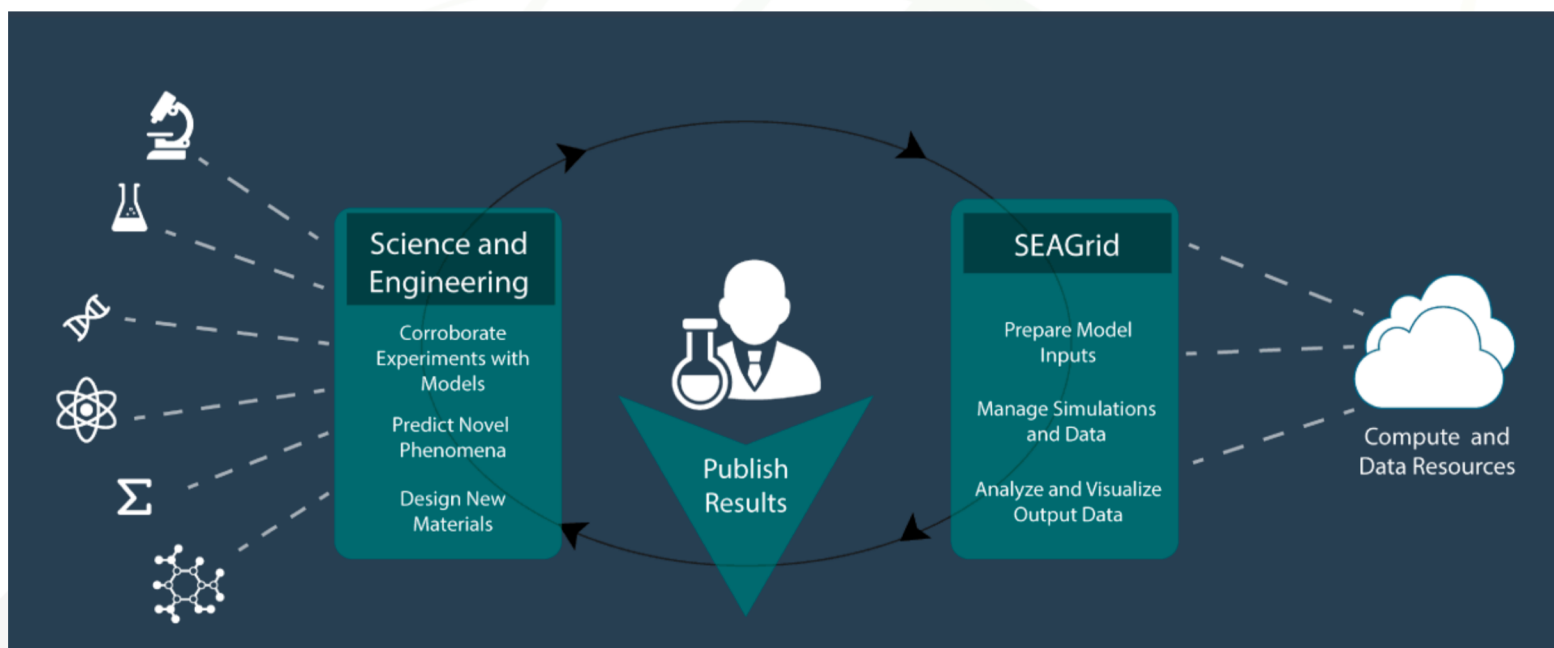

DOI: 10.1038/sdata.2016.18

What is SEAGrid?

- Science and Engineering Application Grid
- Science Gateway built with Apache Airavata Middleware Framework
- This adoption centered on small molecules and fluorescent properties

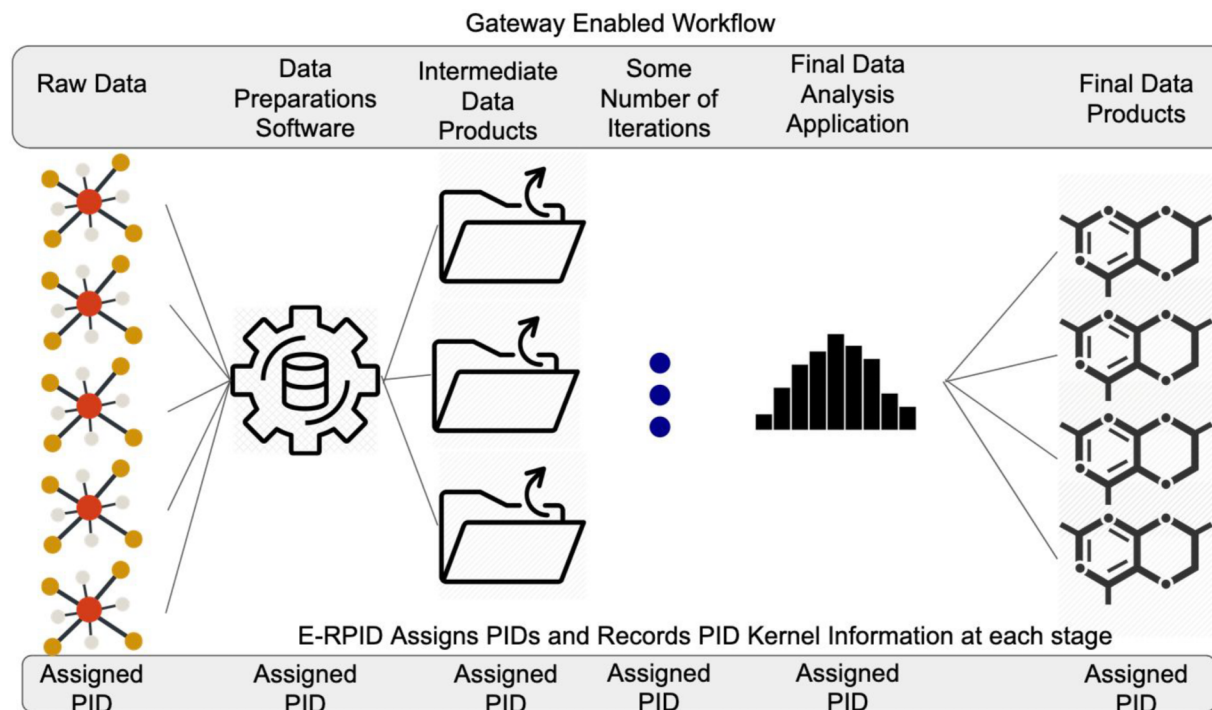

What is the RPID Testbed?

- 🌐 Data cyberinfrastructure for minting PIDs, resolution of PID metadata, data type registry, and protocol for operations on digital objects
- 🌐 Basically the cyberinfrastructure to implement technical components of FAIR principles
- 🌐 Services leverage several RDA Outputs and Recommendations
 - PID Kernel Information Strawman Profile
 - Data Type Registry
 - Heavily leverages work done in the Data Fabric WG
- 🌐 NSF Funded Testbed (Grant No. 1839013)
- 🌐 More at <https://rpidproject.github.io/rpid/>

The RDA Adoption Project

- 6-Month project funded by RDA-US
- Integrates SEAGrid with ERPID Services to provide a FAIR Science Gateways

A quick demo of SEAGrid

 <https://rpid.seagrid.org> if time allows.

 If there's not time for a demo go to
<http://hdl.handle.net/11723/SEAGrid.96f51339-8bfe-4b69-a11e-597f21f31ddb> and explore.

Conclusion

- SEAGrid has been integrated with the RPID testbed services to implement FAIR science workflows
 - We are currently exercising the integrated system and considering publishing run results to a public fluorophores data repository
- Workflow PIDs describe the components of computational processes used during a scientific workflow
- With the PID you could recreate the entire computation workflow
 - Though in the real world you would probably not recreate it in its entirety
 - A realistic scenario would be to mix new or updated data, software, or parameters into a previously used workflow method
 - No access to SEAGrid is necessary to get the metadata necessary for this scenario
- Directly impacts the FAI principles, not as much for the R
- Is extendable in both metadata and to other Airavata based science gateways
- This project leverages outputs and resources made available by the RDA Community

Questions?

Monday 15th June

14:00 UTC & 23:00 UTC

Data Management

Develop best practices and tools for non-static, machine-readable data management plans which can evolve throughout the research data lifecycle, as well as be machine-readable by collaborators and stored with the data.

23 Things Revisited: Field guides to research data management, an adoption project

Mijke Jetten, Cees Hof & Margriet Miedema

Representing the 23 Things task group of the (Dutch) National Coordination Point Research Data Management (LCRDM)

Recommendations & Outputs Catalogue short-link: <https://bit.ly/2UhOxyH>

Adopting the 23 Things by the Dutch community

What? Creating versions of the 23 Things for different audiences, by the Dutch community

Why? 23 Things as a shared reference tool for knowledge on RDM. Improving national cooperation, and a common understanding of RDM among diverse practitioners and supporters

How? For this RDA adoption grant, a LCRDM task group generates four deliverables between June '19 and July '20

Today's session

1. Summary of the project
2. Showcase: 23 Things tool
3. How can you contribute, as a potential future adopter

23 Things: Libraries for Research Data

An overview of practical, free, online resources and tools that you can begin using today to incorporate research data management into your practice of librarianship.

Research Data Sharing Without Barriers

Learning Resources

Librarians are learning how to apply the principles of library science to solve problems and to provide new services related to research data.

1. A "top ten" list of **recommendations** for libraries to get started with research data management from LIBER, <http://bit.ly/RDAthing1>
2. Relevant concepts are presented and mapped in the **e-Science Thesaurus**, <http://bit.ly/RDAthing2>
3. Understanding the life of research data with the **DCC Curation Lifecycle Model**,

Learning Resources
Data Reference and Outreach
Data Management Plans
Data Literacy
Citing Data
Data Licensing and Privacy
Digital Preservation
Data Repositories
and a Community of Practice

..to help librarians engage in research data management!

Data Reference & Outreach

Librarians are answering questions about data from patrons and conducting outreach to assess the data needs of their researchers and

10. Questions about data answered by experts on the **DataQ** forum, <http://bit.ly/RDAthing10>

Data Management Plans

Librarians are becoming familiar with funder requirements and consulting with researchers to help them write and implement effective data management plans.

11. One example is the **DMPTool** that lists funder requirements in the United States and builds a plan by asking the researcher to answer a series of questions. Other countries such as the U.K. and Canada have similar tools, <http://bit.ly/RDAthing11>

The original [23 Things](#) was created by the RDA Libraries for Research Data IG

Recommendations & Outputs Catalogue short-link: <https://bit.ly/2UhOxyH>

The process....

Phase 1

Creating a Dutch nationwide commitment

The project's implementation plan is shared in the LCRDM pool of experts and other Dutch stakeholder groups on data management.

Deliverable:

doi.org/10.5281/zenodo.3337870

<https://doi.org/10.5281/zenodo.3337870>

Recommendations & Outputs Catalogue short-link: <https://bit.ly/2UhOxyH>

The process....

Phase 2

Adjusting the 23 Things

We started creating local versions of the 23 Things for the Dutch community. Via joint sprint sessions, the original resource is being updated and adapted to the Dutch community, and different audiences.

Deliverable:

doi.org/10.5281/zenodo.3465895

<https://doi.org/10.5281/zenodo.3465895>

Recommendations & Outputs Catalogue short-link: <https://bit.ly/2UhOxyH>

The process....

Input asked

Audience-specific versions

Join the community effort in creating an overview of RDM resources. Help us finalize audience-specific versions of the 23 Things for researchers & PhD candidates, Bachelor & Master students, data & subject librarians, data stewards, IT support staff & IT specialists, research software engineers, and policy makers.

<https://doi.org/10.5281/zenodo.3773663>

Recommendations & Outputs Catalogue short-link: <https://bit.ly/2UhOxyH>

The process....

Phase 3

Getting the 23 Things adopted

Particularly in training, the 23 Things are expected to be useful, as it may help creating a consensus on the content of RDM courses in the Netherlands. One way of doing this is by developing an online tool for browsing the various audience-versions of the 23 Things.

Deliverable:

Recommendations for use of the 23 Things

The process....

Phase 4

Dissemination of experiences and final versions

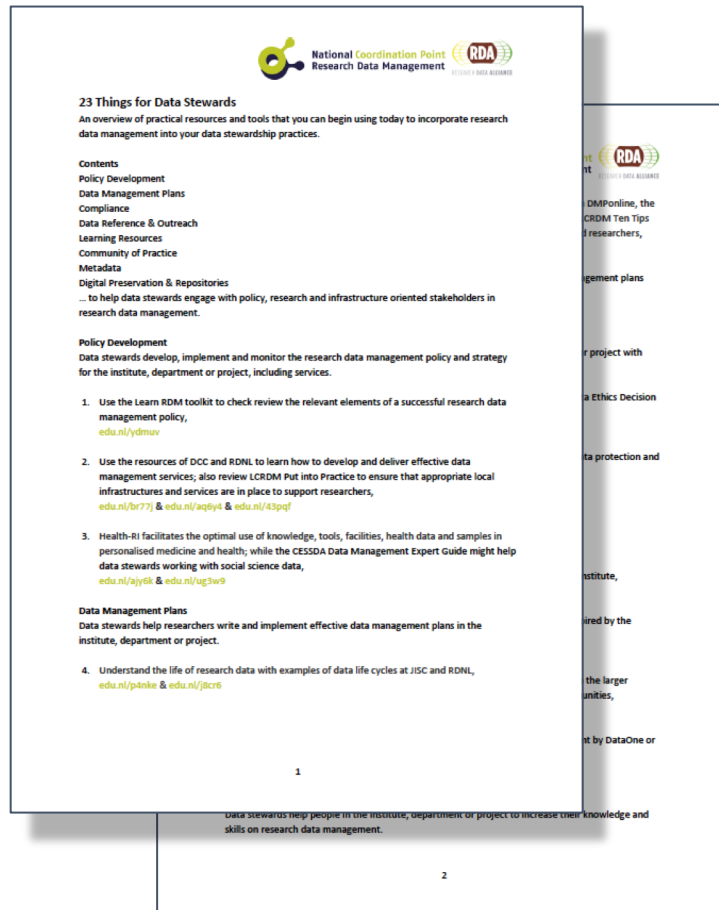

The project will be promoted via blogs, webinars, conferences and an article in an international data journal. All materials and outputs (including sharing our experiences to allow others to follow in our footsteps) will be published on Zenodo.

Deliverable:
Sustainability plan

Recommendations & Outputs Catalogue short-link: <https://bit.ly/2UhOxyH>

The output....

Digital sheets for training purposes

Using the database!

A user story....

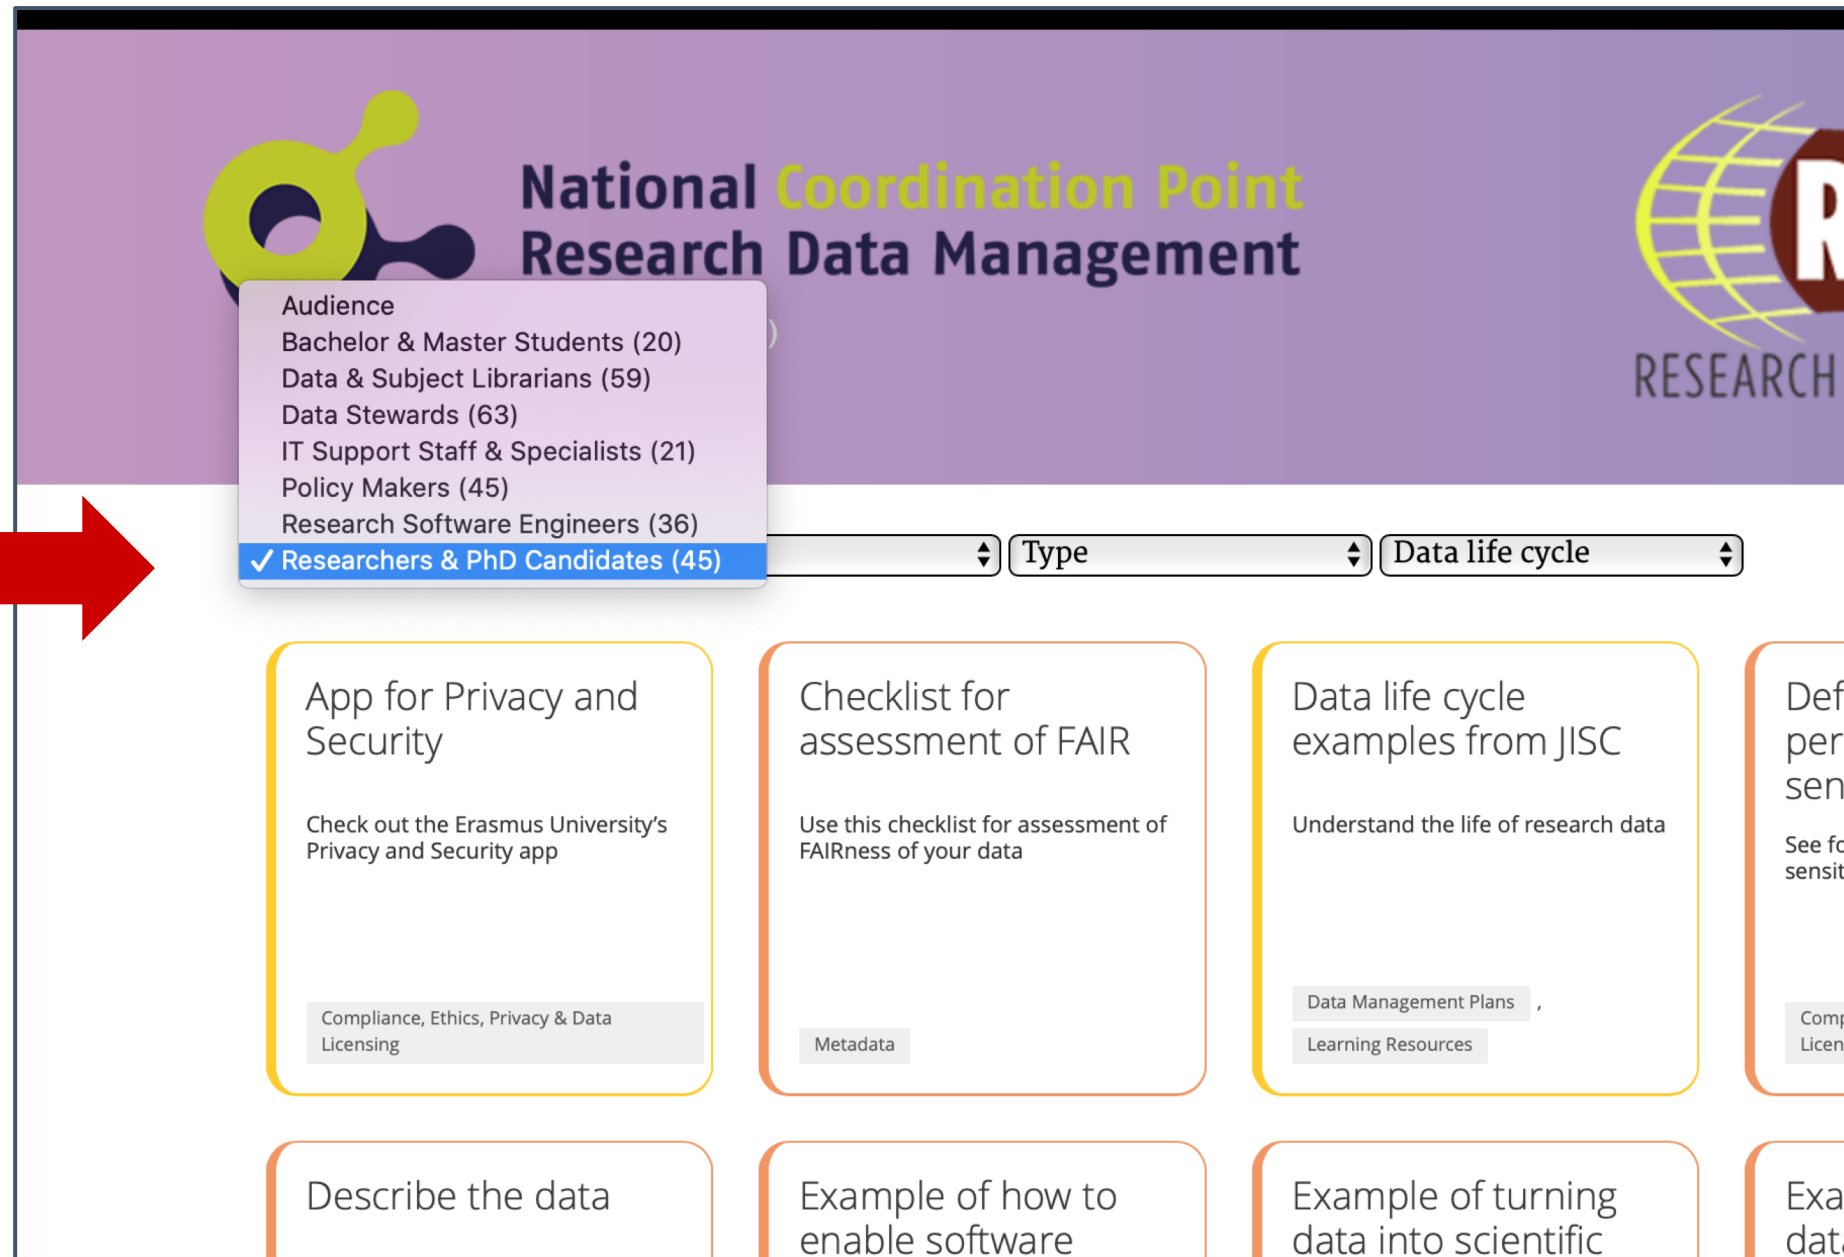

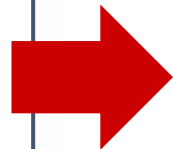

Boris:

- 1) Is a postdoctoral researcher at the TU Delft
- 2) Has shared his code with one of his PhD students
- 3) She asked him how she should cite his code/software in her thesis?

Recommendations & Outputs Catalogue short-link: <https://bit.ly/2UhOxyH>

Boris selects his audience...

The screenshot shows the website header with the NCP RDM logo and title. Below the header is a navigation bar with a dropdown menu for 'Audience' and two filter buttons: 'Type' and 'Data life cycle'. The 'Audience' dropdown is open, showing a list of roles with counts, where 'Researchers & PhD Candidates (45)' is selected. Below the navigation bar is a grid of resource cards. The first row contains four cards: 'App for Privacy and Security', 'Checklist for assessment of FAIR', 'Data life cycle examples from JISC', and a partially visible 'Def per sen' card. The second row contains four cards: 'Describe the data', 'Example of how to enable software', 'Example of turning data into scientific', and a partially visible 'Exa dat' card.

Example of turning data into scientific

Boris selects his
theme...

The screenshot shows the homepage of the National Coordination Point Research Data Management (The Netherlands). The header features the organization's logo and name. Below the header, there is a navigation bar with a dropdown menu for 'Theme' and a 'Data life cycle' dropdown. A red arrow points to the 'Theme' dropdown, which is open, showing a list of themes with their respective counts. The themes listed are: Citing Data & Code (2), Community of Practice (2), Compliance, Ethics, Privacy & Data Licensing (11), Data Management Plans (7), Data Repositories (3), Learning Resources (6), Metadata (11), Outreach (2), Policy Development (1), and Setting the Scene (2). The 'Citing Data & Code' theme is currently selected. Below the navigation bar, there are several content cards, including 'App for Privacy and Security', 'Data life cycle examples from JISC', and 'Describe the data'.

Boris gets two
possible
solutions...

The screenshot shows the website header with the logo and text "National **Coordination Point** Research Data Management (The Netherlands)". Below the header is a navigation bar with four dropdown menus: "Researchers & PhD Ca", "Citing Data & Code (2)", "Type", and "Data life cycle". The "Citing Data & Code (2)" menu is highlighted with a blue border. Below the navigation bar are two main content boxes. The left box, titled "Example of how to enable software citation", contains the text "Learn how to enable citation of your software" and a button labeled "Citing Data & Code". The right box, titled "Promote the scientific value of data and code", contains the text "Learn how to cite data and code in publications" and a button labeled "Citing Data & Code". Two large red arrows point from the text "Boris gets two possible solutions..." to these two content boxes.

Placement of Citations

Intra-work:

- *Should provide sufficient information to identify cited data reference within included reference list.*
- *Citation to data should be in close proximity to claims relying on data. [Principle 3]*
- *May include additional information identifying specific portion of data related supporting that claim. [Principle 7]*

Example: The plots shown in Figure X show the distribution of selected measures from the main data [Author(s), Year, portion or subset used].

Full Citation:

Citation may vary in style, but should be included in the full reference list along with citations to other types works.

Example:

References Section

Author(s), Year, Article Title, Journal, Publisher, DOI.

Author(s), Year, Dataset Title, Data Repository or Archive, Version, Global Persistent Identifier.

Author(s), Year, Book Title, Publisher, ISBN.

TIME FOR QUESTIONS!

Recommendations & Outputs Catalogue short-link: <https://bit.ly/2UhOxyH>

Questions?

Recommendations and outputs catalogue

- RDA Outputs are classified as **RDA Recommendations** (*official, endorsed results of RDA Groups*), **Supporting Outputs** (*useful solutions from our RDA Working and Interest Groups*) or **other Outputs**
- They can be searched according to their status, **Data Life Cycle topics** or scientific domain

rd-alliance.org/recommendations-and-outputs/catalogue

Tell your adoption story!

- **Are you an adopter?** RDA is actively seeking new adoption stories to inspire the further uptake of RDA outputs.
- **Submit your story here:**
<https://www.rd-alliance.org/tell-your-rda-adoption-story>

RDA ADOPTION STORIES

Adopters of RDA outputs share their experiences and lessons learned to inspire further uptake of RDA outputs

 Read the current adoption stories

 Submit your story through the webform

Call for papers: CODATA Data Science Journal

- CODATA Data Science Journal: <https://datascience.codata.org/>
- **RDA special collection:**
 - Results produced by an IG or WG;
 - Description of an Adoption Case outlining how a specific recommendation or output has been implemented;
 - Other types of work related to RDA activities.
- <https://datascience.codata.org/collections/special/research-data-alliance-results/>
- RDA Europe 4.0 has funds available for the publication of articles in DSJ
- Open to all interested applicants regardless of their geographical provenance.
- **Deadline 17 July 2020**

Global Adoption Week schedule

Day & Topic	Sessions
Monday, 15th June 2020 - Data Management	14:00 UTC + 23:00 UTC
Tuesday, 16th June 2020 - Data Description	06:00 UTC + 14:00 UTC
Wednesday, 17th June 2020 - Identify, Store and Preserve	07:00 UTC + 14:00 UTC
Thursday, 18th June 2020 - Disseminate, Link and Find	07:00 UTC + 12:00 UTC
Friday, 19th June 2020 - Policy, Legal Compliance and Capacity	05:00 UTC + 13:00 UTC
