PROJECT AIM

• Systematic, focused, high quality, comprehensive, consistent and peer-reviewed international landscape analysis report on the position and complementarities of the major European research infrastructures in the international research infrastructure landscape.
BASICS

• Commission H2020 project, now in the Grant Agreement preparation phase
• Will run from 2017 to 2020
• 2 M€ budget, 11 partners
• coordinated by U. Helsinki
RESEARCH INFRASTRUCTURES (RI)?

• No global definition, using a version of the ESFRI definition:
  • must provide facilities, resources or related services to researchers also from outside of the Research Infrastructure institution itself.
  • The purpose of the RI services must be to conduct or facilitate research. This requirement is needed to maintain the focus on research-orientation;
  • The international RI must also have some degree of longevity
BACKGROUND

ESFRI Projects
ESFRI Landmarks

Infrastructure Clusters

Significant investments from the Member States
1. European engagement (2017)
3. Integration and Dissemination (2019)
COLLABORATION? YES!

• A lot of potential for collaboration
  • Finding infrastructures
  • Contacts, networks
  • Sharing collected data
  • Increasing understanding
  • Less overlapping information collection (avoiding survey-isis)
