2020 RDA Working Group: FAIR for Research Software

Case Statement

1. WG Charter

One of the major challenges of data-driven research is to facilitate knowledge discovery by assisting humans and machines in their discovery of, access to, integration and analysis of data and their associated research objects, e.g., algorithms, software, and workflows. To address this, an initial effort to define a "DATA FAIRPORT" began in 2014 at the Lorentz workshop and transitioned into developing a set of FAIR data Guiding Principles in 2016. The details of the FAIR data principles strongly contribute to addressing this challenge with regard to research data, and the principles, at a high level, are intended to apply to all research objects; both those used in research and that form the outputs of research. Here we focus on the adaptation and adoption of the FAIR principles for the case of research software.

Software has become essential for research. To improve the findability, accessibility, interoperability, and reuse of research software, it is desirable to develop and apply a set of FAIR Guiding Principles for software. Many of the high-level FAIR data principles can be directly applied to research software by treating software and data as similar digital research objects. However, specific characteristics of software — such as its executability, composite nature, and continuous evolution and versioning — make it necessary to revise and extend the original data principles.

Application of the FAIR principles to software will continue to advance the aims of the open science movement. The FAIR For Research Software Working Group (FAIR4RS WG) will be jointly convened as an RDA Working Group, FORCE11 Working Group, and Research Software Alliance (ReSA) Taskforce, in recognition of the importance of this work for the advancement of the research sector.

FAIR4RS WG will enable coordination of a range of existing community-led discussions on how to define and effectively apply FAIR principles to research software, to achieve adoption of these principles. The working group will deliver:

- A document developed with community support defining FAIR principles for research software

---

1 See also DTL, 2014; and Kok, 2014.
2 See also Wilkinson et al., 2016.
3 For further information refer to Clément-Fontaine et al., 2019.
- A document providing guidelines on how to apply the FAIR principles for research software (based on existing frameworks)
- A document summarising the definition of the FAIR principles for research software, implementation guidelines and adoption examples.

2. Value Proposition

**FAIR4RS WG** will define FAIR principles for research software and identify practical means of achieving them.

This work will be of value to software project owners, research software engineers, software developers who publish their software, software catalog maintainers, repository managers, software preservation and archival experts, policymakers who are responsible for defining digital policies, and organisations that create, modify, manage, share, protect, and preserve research software, funders of research, and others with an interest in the FAIR principles for research software.

FAIR4RS will provide a range of ways for these stakeholders to engage. RDA communication channels including the **RDA FAIR4RS** email list will facilitate collaborations through invitations to webinars, collaborative documents, surveys etc.; and provide updates on progress. All documentation produced by the group will be publicly accessible.

Stakeholders are able to engage at any of three levels:

- **Steering committee.** The steering committee is responsible for leadership of the WG.
- **Feedback cohort.** Community members can choose to engage with the WG by providing feedback at their preferred pace via the WG RDA space or the WG **GitHub repo**.
- **Advocates.** Community members who can play a key role in endorsing and promoting the outcomes of this group will receive regular updates through the email list.

3. Engagement with existing work in the area

The FAIR4RS WG resulted from the “**FAIR for research software**” session at VP15, run by the Software Source Code IG along with authors of the position paper “**Towards FAIR Principles for Research Software**” https://doi.org/10.3233/DS-190026. This group brings together and builds on a wide range of work internationally, notably the SSC IG activity at P13 and events within the ELIXIR community. Other key community publications and events involving AGU, ARDC, CLARIAH, CODATA, DANS, ELIXIR, EOSC FAIR WG, FAIRsFAIR, FAIRsharing, GO-FAIR, NLeSC, ReSA, SSI, Software Heritage and TIB are included in the following list4:

---

4 Further details on these initiatives are contained in Software Source Code IG wiki, 2020.
Members of these groups have been collaborating with FAIR4RS WG, and the adoption plan for the WG outcomes will continue this work, and will bring in other organizations as appropriate, such as US Research Software Sustainability Institute (URSSI), Workshop on Sustainable Software for Science: Practice and Experiences (WSSSPE), Software Preservation Network (SPN), Software Heritage, Software Sustainability Institute (SSI), Society of Research Software Engineering, CodeMeta, in addition to other national and disciplinary initiatives.

The significance of this work is illustrated by the convening of FAIR4RS WG across RDA, FORCE11 and ReSA. FORCE11 is a community of scholars, librarians, archivists, publishers and research funders that has arisen organically to help facilitate the change toward improved knowledge creation and sharing. ReSA’s vision is to see research software recognised and valued as a fundamental and vital component of research worldwide. ReSA leads a number of taskforces that assist in achieving these aims. This new FAIR4RS WG will be a taskforce of ReSA.

RDA groups

FAIR4RS will also engage with a range of other RDA WGs whose interests overlap, and ensure that the work of the WG aligns with the work of the other groups:

- **CURE FAIR WG** (not yet endorsed) - focusing on the reproducibility aspect of FAIR for data and code.
- **SSC IG** - provides a forum to discuss issues on management, sharing, discovery, archival and provenance of software source code. It pays special attention to source code that generates research data and plays an important role in scientific publications. FAIR4RS is proposed to be a WG of the SSC IG.
- **SCID WG** - bringing together a broad panel of stakeholders directly involved in software identification and planning an output with concrete recommendations for the academic community to ensure that the solutions that will be adopted by the academic players are compatible with each other and especially with the software development practice of tens of millions of developers worldwide.
• **FAIR data maturity model** - working on RDA recommendations for a common set of core assessment criteria for FAIRness and a generic and expandable self-assessment model for measuring the maturity level of a dataset.

Other potential groups to coordinate with include: [Go FAIR IG](#), [Exposing Data Management Plans WG](#), [Active Data Management Plans IG](#), [Research Funders and Stakeholders on Open Research Data Management Policies and Practices IG](#), and [Research Metadata Schemas WG](#).

### 4. Work Plan

Timeline total: 18 months, starting from the endorsement of the WG

<table>
<thead>
<tr>
<th>Milestone</th>
<th>Deliverable</th>
<th>Due date</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Identify issues in definition of FAIR for research software, based on analysis of existing definitions and frameworks. Include definition of research software to delineate the scope that FAIR will be applied to. The draft would identify commonalities and differences, and thus key questions for the community to engage around. Initiate consultation with community (including identification of who is in this community)</td>
<td>A review document identifying challenges in defining FAIR for research software</td>
<td>Prework: 0-4 months</td>
</tr>
<tr>
<td>2 Complete community consultation and finalise definition</td>
<td>Document developed with community support defining <strong>FAIR principles for research software</strong></td>
<td>+6 months</td>
</tr>
<tr>
<td>3 Draft plan for development of guidelines for implementation, including identification of use cases, and community consultation on guidelines</td>
<td></td>
<td>+12 months</td>
</tr>
<tr>
<td>4 Implement plan and develop guidelines</td>
<td>Document providing <strong>guidelines</strong> on how to apply the FAIR principles for research software</td>
<td>+12 months</td>
</tr>
<tr>
<td>5 Draft plan for adoption of guidelines, including identification of adoption examples</td>
<td></td>
<td>+18 months</td>
</tr>
</tbody>
</table>
Implement plan for adoption of guidelines, which will continue after the cessation of this WG.

Document summarising definition of the FAIR principles for research software, implementation guidelines and adoption examples

+18 months

Note that while the group is interested in FAIR metrics and indicators for research software, this is not in scope for this WG. This could be an activity for a follow-on group.

5. Adoption Plan

FAIR4RS WG will define principles for FAIR for Research Software, then guidelines and practices for their widespread adoption across the research software community at national, disciplinary, and international levels. The following table details the engagement that will be undertaken towards relevant milestones, including final adoption.

<table>
<thead>
<tr>
<th>Milestone</th>
<th>Engagement</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Identify issues in definition of FAIR for research software, based on analysis of existing definitions and frameworks.</td>
</tr>
<tr>
<td>2</td>
<td>Complete community consultation and finalise definition</td>
</tr>
<tr>
<td>3</td>
<td>Draft plan for development of guidelines for implementation, including identification of use cases, and community consultation on guidelines</td>
</tr>
<tr>
<td>4</td>
<td>Implement plan and develop guidelines</td>
</tr>
</tbody>
</table>
The convening of this WG across RDA, FORCE11, and ReSA will support usage of the outcomes across those communities. RDA, FORCE11, and ReSA will systematically promote the outcomes to their specific communities, aiming to raise awareness and support their real-life adoption, and thus facilitate a wider adoption of the outcomes of the Working Group by existing and emerging initiatives. Organisations with a focus on FAIR will also be engaged, to encourage promotion of the application of FAIR to research outputs other than data.

6. Initial Membership

During the virtual Plenary 15 (March 2020), 50 participants joined the two SSC IG sessions. They were invited to indicate their interest in joining FAIR4RS WG. This provided a list of 34 initial members. Communications around the formation of this WG will continue to promote membership to the wider community, which is intended to extend beyond RDA members.

Steering Committee

The co-chairs of the [RDA FAIR4RS WG](#) are Michelle Barker, Leyla Garcia, Daniel S. Katz, Paula Andrea Martinez and Neil Chue Hong. They will liaise between RDA and the Steering Committee leading FAIR4RS:

<table>
<thead>
<tr>
<th>First name/s</th>
<th>Surname</th>
<th>Gender</th>
<th>Institution/s</th>
<th>Country</th>
</tr>
</thead>
<tbody>
<tr>
<td>Michelle</td>
<td>Barker*</td>
<td>Female</td>
<td>ReSA, University of Melbourne</td>
<td>Australia</td>
</tr>
<tr>
<td>Leyla</td>
<td>Garcia*</td>
<td>Female</td>
<td>ZB MED Information centre for life sciences</td>
<td>Germany</td>
</tr>
<tr>
<td>Daniel S</td>
<td>Katz*</td>
<td>Male</td>
<td>University of Illinois at Urbana-Champaign</td>
<td>US</td>
</tr>
<tr>
<td>Neil</td>
<td>Chue Hong*</td>
<td>Male</td>
<td>Software Sustainability Institute / EPCC, University of Edinburgh</td>
<td>UK</td>
</tr>
</tbody>
</table>
The co-chairs will utilise a public Google Drive collaborative working folder (through ReSA) and a GitHub repository (through FORCE11) for WG documents, to promote transparency and accessibility.

Contributions to the case statement

Paula Andrea Martinez, Michelle Barker, Daniel S. Katz, Leyla Garcia, Neil Chue Hong, Morane Gruenpeter, Fotis Psomopoulos, Jennifer Harrow, Mateusz Kuzak and Peter McQuilton.
