

# **An Update of TRUST principles**

**Dr. Dawei Lin, Ph.D.**

Division of Allergy, Immunology, and Transplantation, NIAID, NIH  
dawei.lin@nih.gov

IG RDA/WDS Certifications of Digital Repositories  
RDA Plenary 14 , October 25<sup>th</sup>, 2019

# Open Science Needs Reliable Home for Data

---

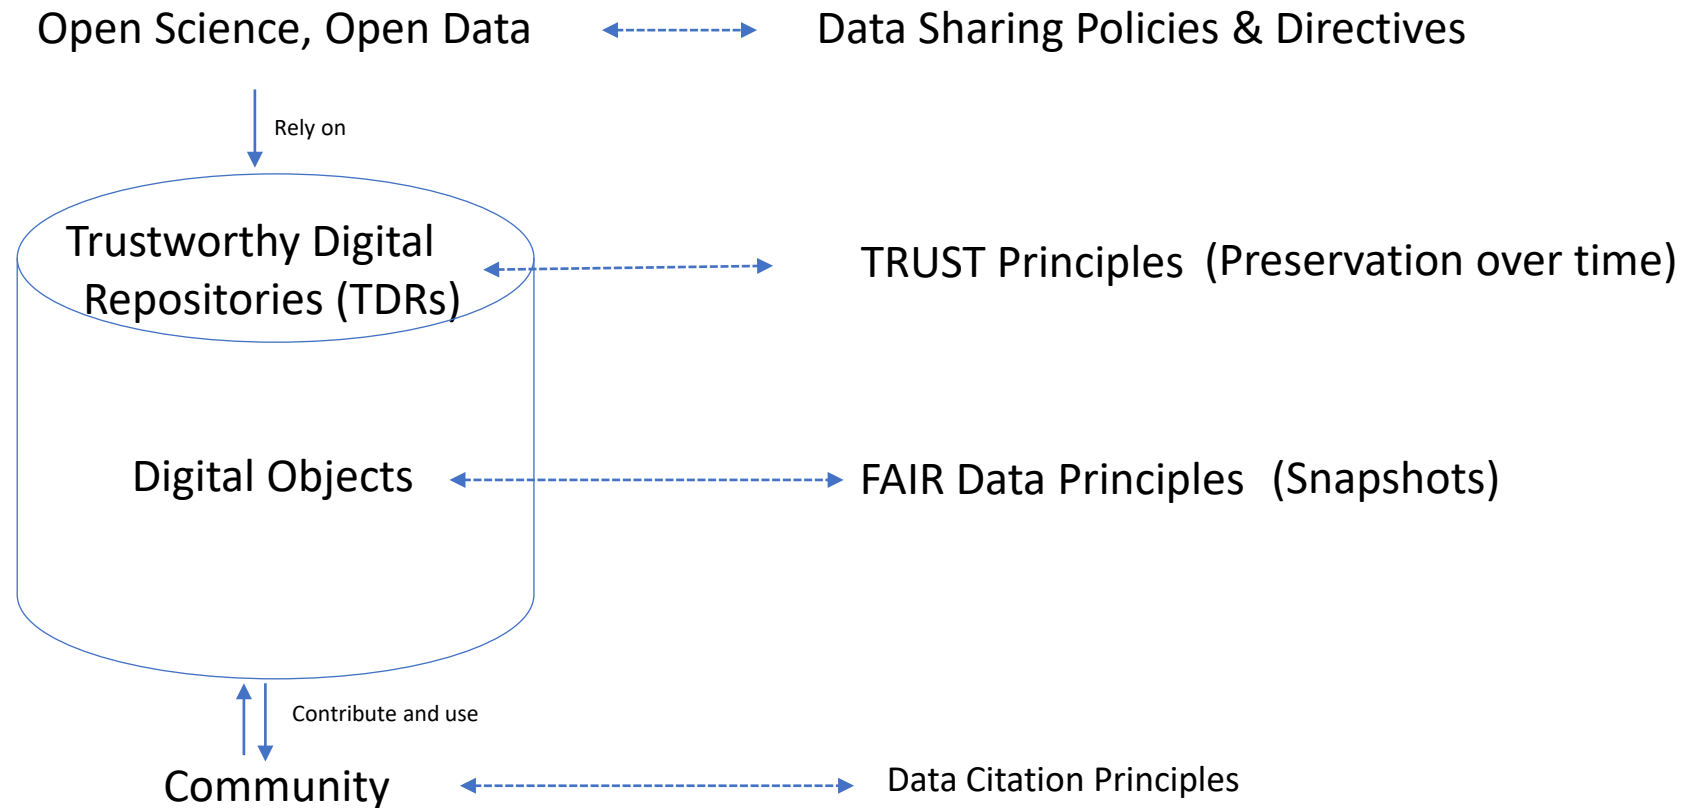

- Dark Data
  - Only 12% of data described in published papers is in recognized repositories. <sup>1</sup>
- Data Repositories
  - Only 20% of 328 biomedical data repositories in the survey are still alive or rebranded after 18 years. <sup>2</sup>

Elixir Core Data Repository Criteria

# The Data Ecosystem Needs TDRs

---

*Open Science, TRUST repository, FAIR data, CARE community*

# Trustworthy Data Repository Certification Standards: An Evolutionary Perspective

# Motivation of TRUST Principles

---

- Draw attention to the role of the repository in data life-cycle
- Develop concise and measurable approaches to achieve Trustworthiness of Digital Repositories (TDR) for long-term preservation and a sustainable operation
- **Not** to replace any standards, criteria, or best practices
- Provide a high-level starting point for advocating, supporting and implementing all certifications and assessments – a messenger

- Marisa De Giusti, Universidad Nacional de La Plata, Comisión de Investigaciones Científicas de la Provincia de Buenos Aires, Argentina.
- Hervé L'Hours, UK Data Archive, UK Data Service, University of Essex, UK
- Wim Hugo, South African Environmental Observation Network, Cape Town, South Africa
- Reyna Jenkyns, Ocean Networks Canada, University of Victoria, Canada.
- Varsha Khodiya, Springer Nature, UK
- Maryann E. Martone, Ph. D. University of California, San Diego and SciCrunch Inc., USA
- Mustapha Mokrane, Data Archiving and Networked Services (DANS), The Netherlands.
- Vivek Havale, Center for Information Technology, National Institutes of Health, Bethesda, Maryland, 20817, USA.
- Jonathan Petters, Data Services, University Libraries, Virginia Tech, Blacksburg, VA 24061, USA.
- Barbara Sierman, KB National Library of the Netherlands
- Dina V. Sokolova, University Libraries, Columbia University, New York, USA
- Martina Stockhause, German Climate Computing Center (DKRZ), Germany

# The TRUST Principles

---

- **T - Transparency** is achieved by providing publicly accessible evidence of the services that a repository does and does not offer.
- **R - Responsibility** is a commitment to provide reliable data services.
- **U - User community** is a commitment to implement and enforce the standards and norm of the user community.
- **S - Sustainability** is the capability to support long-term data preservation and use.
- **T - Technology** is the infrastructure and capabilities to support the repository operations.

# T – Transparency

---

**Transparency** is achieved by providing publicly accessible evidence of the services that a repository can and can not offer.

## **Key concepts**

- Clear mission statement
- Policy and governance
- Specific claims of capability

# R - Responsibility

---

**Responsibility** is a commitment to provide high quality technical data services.

## **Key concepts**

- Responsibility is shared (data producers, institutions, funders, repositories, publishers, and data users).
- Process and workflow documentations to ensure data and service quality.
- Guidance to content deposition and prospective users

# U – User Community

---

**User community** is a commitment to implement and enforce the standards and norm of the user community

## **Key concepts**

- Key user base – designated community
- Monitoring need changes overtime
- Enforcement of community norms and standards

# S – Sustainability

---

**Sustainability** is the capability to support long-term data preservation and use.

## **Key concepts**

- Plans for risk mitigation, business opportunity, disaster discovery and succession.
- Plans for long-term data preservation
- Credible contingency plans supported by public evidence such as certifications.

# T – Technology

---

**Technology** is the infrastructure and capabilities to support the repository operations.

## **Key concepts**

- Infrastructure refers to the collection of people, processes, and technologies
- Hardware, software technologies, and cybersecurity measures adequate to the requirements of a robust, stable, and secure operation

# Road Map

---

- Mappings of the TRUST principles to a range of relevant standards, criteria, and practices. Such as:
  - OAIS (ISO14721)
  - ISO16363
  - CoreTrustSeal
  - Criteria for Elixir Core Data Resources
  - .....
- Write a formal publication
- Solicit endorsements

# Questions/Discussions

---

- Does principles apply or not to your domain?
- Are any key principles missing?
- What information need to make the principle endorsable?

# Functional Relationship of TRUST and FAIR

---
