

RDA in The Netherlands

"Our national node provides a link between the global research data community that convenes at RDA, and the national research community. It is a two-way stream of information, ideas, and people, with RDA outputs and international best practices flowing to the national level, and Dutch expertise and experiences streaming to the international level. We have managed to get the biggest (RDM) initiatives already active in The Netherlands around one table. We are facilitating cross-pollination of existing initiatives and helping them to broaden their horizon over national borders."
