About RDA

[Home » About RDA](#)

The Research Data Alliance (RDA) builds the social and technical bridges that enable open sharing of data.

The RDA vision is *researchers and innovators openly sharing data across technologies, disciplines, and countries to address the grand challenges of society.*

The current global research data landscape is highly fragmented, by disciplines or by domains, from oceanography, life sciences and health, to agriculture, space and climate. When it comes to cross-disciplinary activities, the notions of "building blocks" of common data infrastructures and building specific "data bridges" are becoming accepted metaphors for approaching the data complexity and enable data sharing. **The Research Data Alliance enables data to be shared across barriers through focused Working Groups and Interest Groups, formed of experts from around the world – from academia, industry and government.** Participation in RDA is open to anyone who agrees to its **guiding principles** of openness, consensus, balance, harmonisation, with a community driven and non-profit approach.

The Research Data Alliance (RDA) was launched as a community-driven organization in 2013 by the European Commission, the United States National Science Foundation and National Institute of Standards and Technology, and the Australian Government's Department of Innovation with the goal of building the social and technical infrastructure to enable open sharing of data.

With close to 4,200 **members** from 110 countries (June 2016), RDA provides a neutral space where its members can come together through focused global **Working and Interest Groups** to develop and adopt infrastructure that promotes data-sharing and data-driven research, and accelerate the growth of a cohesive data community that integrates contributors across domain, research, national, geographical and generational boundaries.

Digital Practices in History and Ethnography IG

Group details

Status: Recognised & Endorsed

Chair(s): Kim Fortun, Mike Fortun, Jason Baird Jackson

Case Statement: [Download](#)

About

RDA's Digital Practices in History and Ethnography Interest Group (DHP-IG) works to advance data standards, practices and infrastructure for historical and ethnographic research, contributing to broader efforts in the digital humanities and social sciences.

Goals

- Advance development of digital infrastructure for historical and ethnographic research through engagement with concrete scholarly practice and projects (such as Open Folklore, the Nunaliit Atlas Framework, the Platform for Experimental and Collaborative Ethnography and Indiana University's Mathers Museum of World Cultures).

ABOUT

Seventh Plenary

Hosted and co-organised by the Japan Science and Technology Agency under the theme “**Making data sharing work in the era of Open Science**” the 7th RDA Plenary meeting took place in Tokyo, Japan from the 1st to the 3rd of March 2016.

Sixth Plenary

The 6th RDA Plenary meeting, with the main theme being ***Enterprise Engagement with a focus on Research Data for Climate Change***, took place in Paris, France from 23-25 Sept 2015

Fifth Plenary

The 5th RDA plenary meeting, with the main theme being ***Adopt a Deliverable***, took place in San Diego, US from 8-11 March 2015

Fourth Plenary

The fourth RDA plenary meeting, with the main theme being ***Reaping the Fruits***, took place in Amsterdam, The Netherlands, 22-24 September 2014.

Third Plenary

Australia, in close partnership with Ireland, hosted the Third Plenary for the Research Data Alliance in Dublin, Ireland on March 26 to 28, 2014 focusing on The ***Data Sharing Community***

Second Plenary

The Second RDA Plenary meeting was held at the National Academy of Sciences in Washington, DC from 16-18 September 2013 and its theme was ***Building Global Partnerships***

First Plenary and RDA Launch Event

The first plenary meeting and **official launch** of RDA was held in Gothenburg, Sweden from 18-20 March 2013.

A project to develop digital collection, storage and distribution strategies for multimedia anthropological information from the Himalayan region

The Digital Himalaya project was designed by Alan Macfarlane and Mark Turin as a strategy for archiving and making available ethnographic materials from the Himalayan region. Based at the Department of Social Anthropology at the University of Cambridge, the project was established in December 2000. From 2002 to 2005, the project moved to the Department of Anthropology at Cornell University and began its collaboration with the University of Virginia. As of July 2014, the project is in the process of relocating to the University of British Columbia, Vancouver, Canada.

Metadata IG

Status: Recognised & Endorsed

The Metadata IG will concern itself with all aspects of metadata for research data. In particular it will attempt to coordinate the efforts of the WGs concerned with metadata to produce a coherent approach to metadata covering metadata modalities of description, restriction, discovery, interoperability, and terminology.

activity relates to data management and standards of research function

Research Data Provenance

The Research Data Provenance Interest Group focuses on the comparison and evaluation of models for data provenance. It is concerned with questions of data origins, maintenance of identity through the data lifecycle, and how we account for data modification.

Repository Platforms for Research Data

Institutions, developers, and other members of the research data community struggle to

Data Fabric IG

Several RDA groups are working on core components supporting a basis for a Data Infrastructure for reproducible science. These include: PID IG, PIT WG, DTR WG, PP WG, MD WG and IG, Provenance IG, Brokering IG, DFT WG and others. Some of these groups are Working Groups and will finish in 2014. Yet we miss an overarching concept & discussion framework for most of these groups to relate the components with the overall data lifecycle landscape and identify gaps, obstacles and possible incompatibilities.

Digital Practices in History and Ethnography IG

DISCUSSION QUESTIONS

THE DATA LANDSCAPE

What data cultures and practices characterize historical and ethnographic research?

- Can these be described with the Data Practices and Curation (DPC) Vocabulary referenced by Carol Palmer?

What workflows characterize historical and ethnographic research? What blocks or creates opportunities for collaboration in these workflows? *When* – at what stages in the research process – do historians and ethnographers – think it appropriate/valid/useful to share research data and findings?

- In her RDA plenary, Carol Palmer pointed us to Harry Collins 1998 paper comparing gravitational wave research groups in Italy and the US – emphasizing the differences in what counted as a publishable result.

What data systems, platforms and tools have historians and ethnographers relied on in the past, and what has been developed in recent years, leveraging digitization?

What data types do historians and ethnographers collect, archive, analyze and potentially share?

Sorting things in: Feminist knowledge representation and changing modes of scholarly production[☆]

Susan Brown^{a,*}, Patricia Clements^b, Isobel Grundy^b

^a School of English and Theatre Studies, University of Guelph, Ontario, Canada N1G 2W1

^b Department of English and Film Studies, University of Alberta, Edmonton, Alberta, Canada T6G 2E5

Synopsis

A feminist web-based research initiative must make electronic publication an integral part of the research design. We are at a critical juncture in the production of scholarly tools in electronic form, as we move from the production of archives that seek to reproduce existing collections of primary material towards more mediated contextual materials, such as the newly published *Orlando: Writing in the British Isles from the beginnings to the present* or the proposal for fusing primary and secondary materials in the projected *Feminisms and Print Culture, 1830–1930* project. This discussion takes the *Orlando Project* as an example of what can be gained by the customized application of semantic markup language to originally digital materials in order to address some crucial issues raised by large-scale humanities computing work. Feminist scholars must participate in the highly politicized processes of knowledge organization to have a shaping impact on humanities research and dissemination, and this shift in our mode of production has major impacts on what scholarly work involves, how it is resourced, how it is conducted and by whom, and how it is credited.

Abstract—This paper uses the case of author Michael Field, the shared writing identity of two late Victorian women, to consider the implications of embracing the semantic web for humanities research. It is argued that the ontologies prevalent

uptake of linked open data standards and semantic web technologies for humanities research. This uptake is expressed in three sorts of contributions: aggregations of humanities relevant information; specialty topic explorations; and tools
