The following describes a research commons

Strongly disagree — Strongly agree

A platform — 2
An ecosystem — 3.6
An integrative portal — 2.1
Federated system of systems — 3.6
Set of tools, applications, and data collections — 3.3
e-Infrastructure / cyberinfrastructure / research infrastructure — 2.3

30
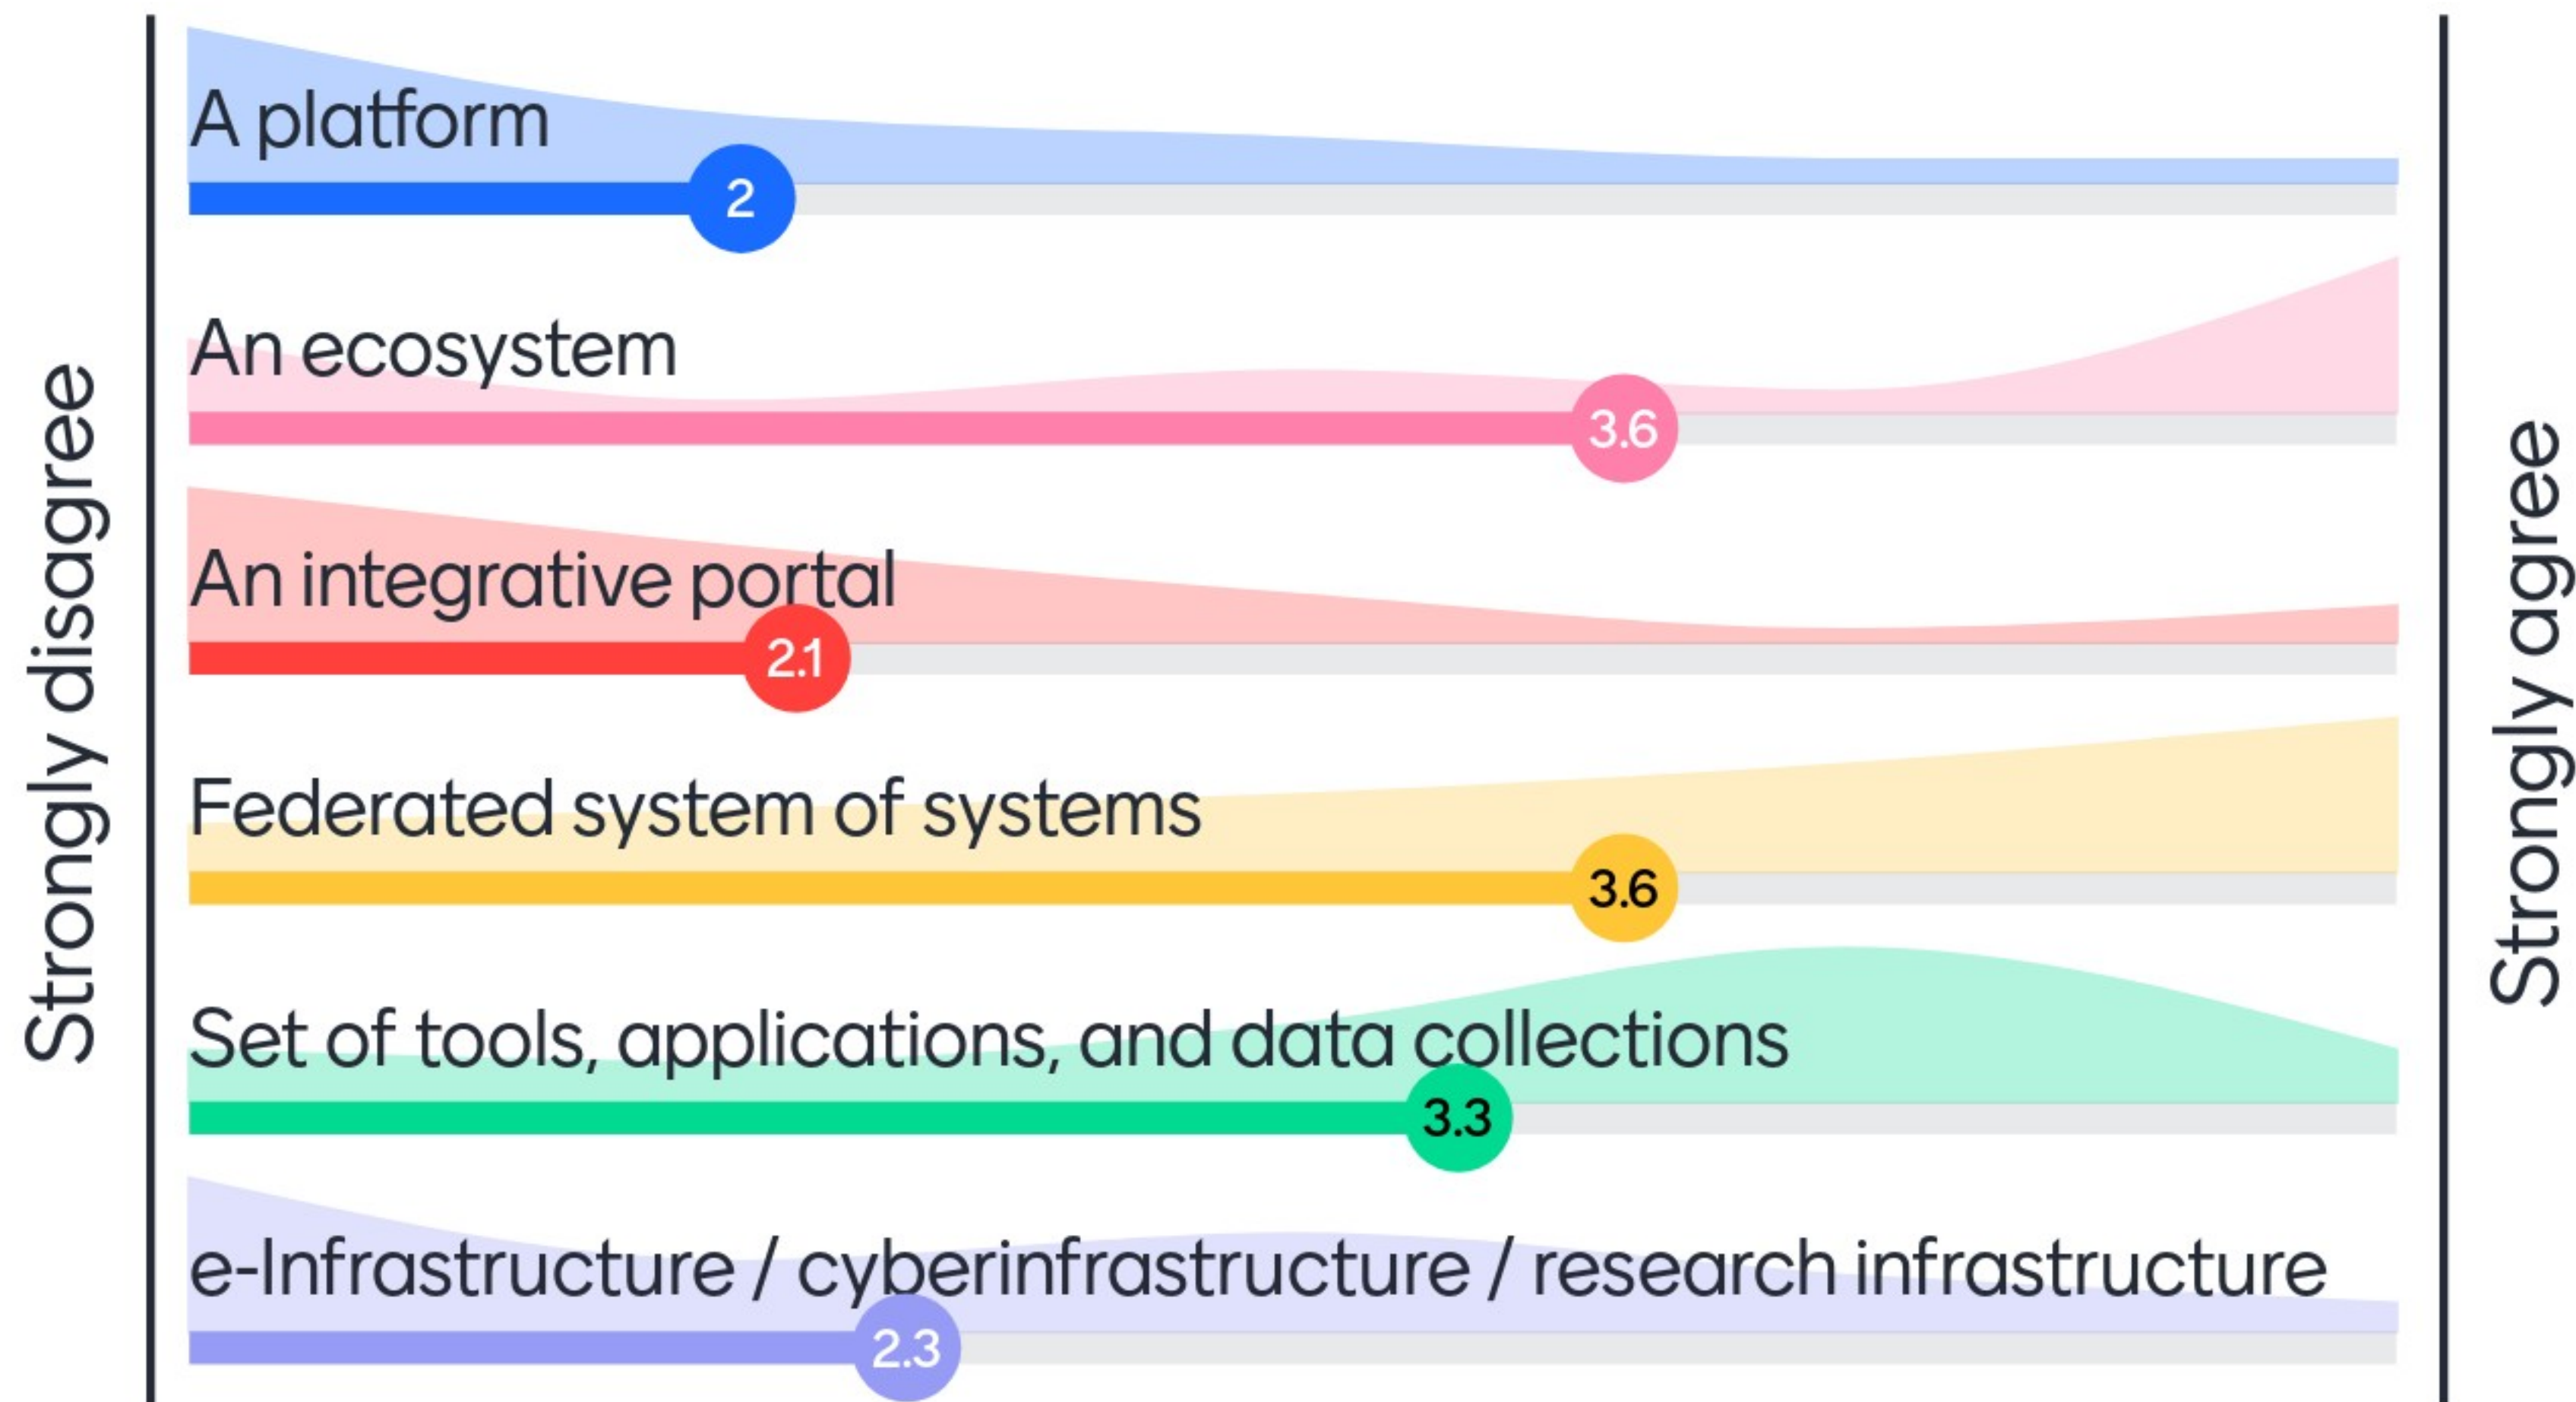

What are the core values that should drive the operation of the commons?

16 Open

20 Trusted

3 Consensus-driven

1 Collective action

7 Democratizing access

10 Community governed

2 Communal-ownership

6 Cross-border

11 Distributed

11 Standards-based

30
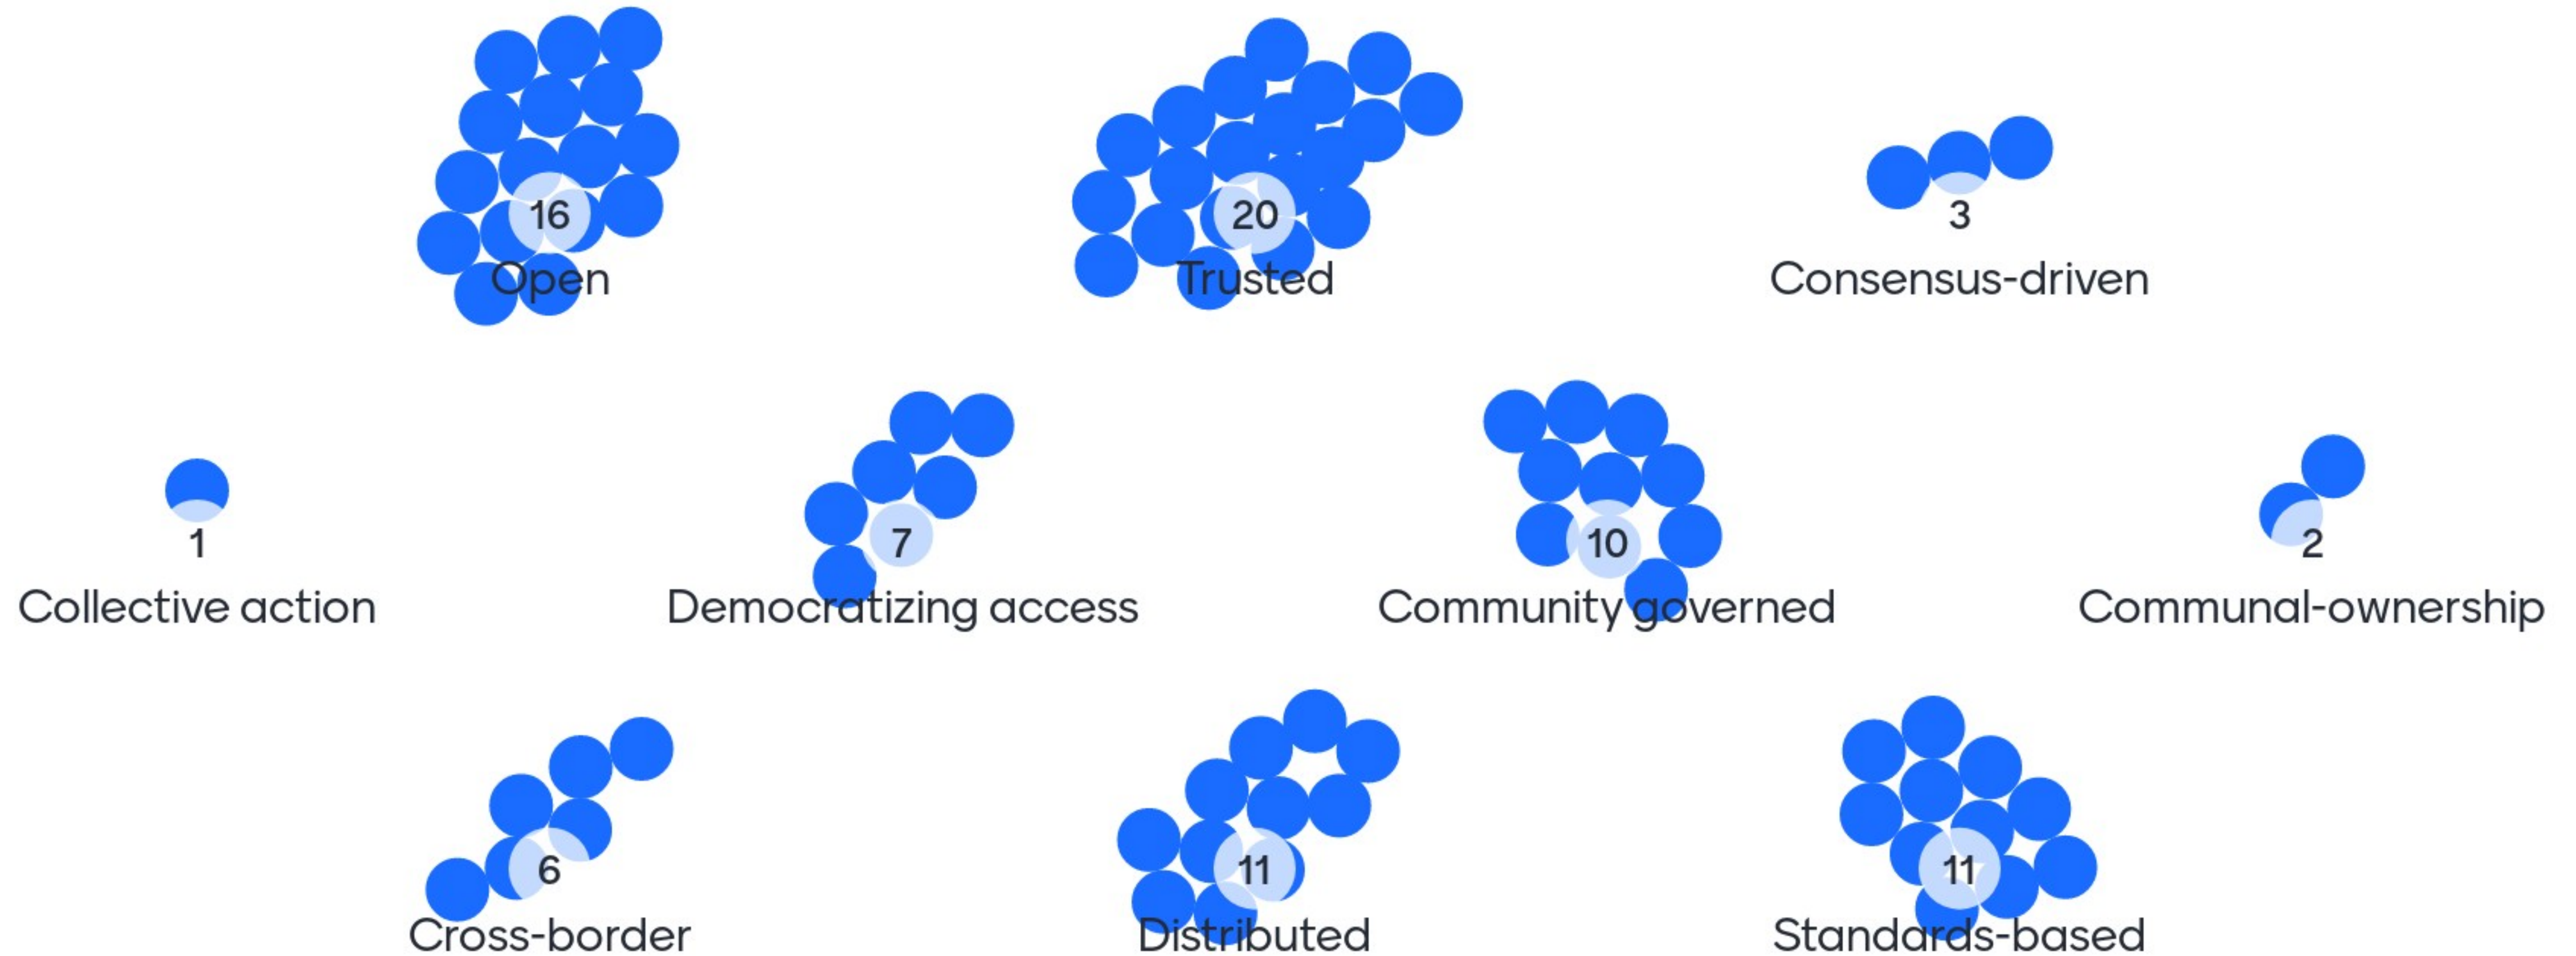

The main purpose of the research commons is

Strongly disagree — Strongly agree

- Enhance the ability to find, share and reuse content — **4**
- Advance innovation and generate new scientific insights — **4**
- Tackle common grand challenges / societal needs — **3.7**
- Increase research productivity and improve reproducibility in science — **4**
- Promote interdisciplinarity — **3**
- Develop capacity of individuals and institutions — **3**
- Increase access to research results by those who pay for the research — **2**
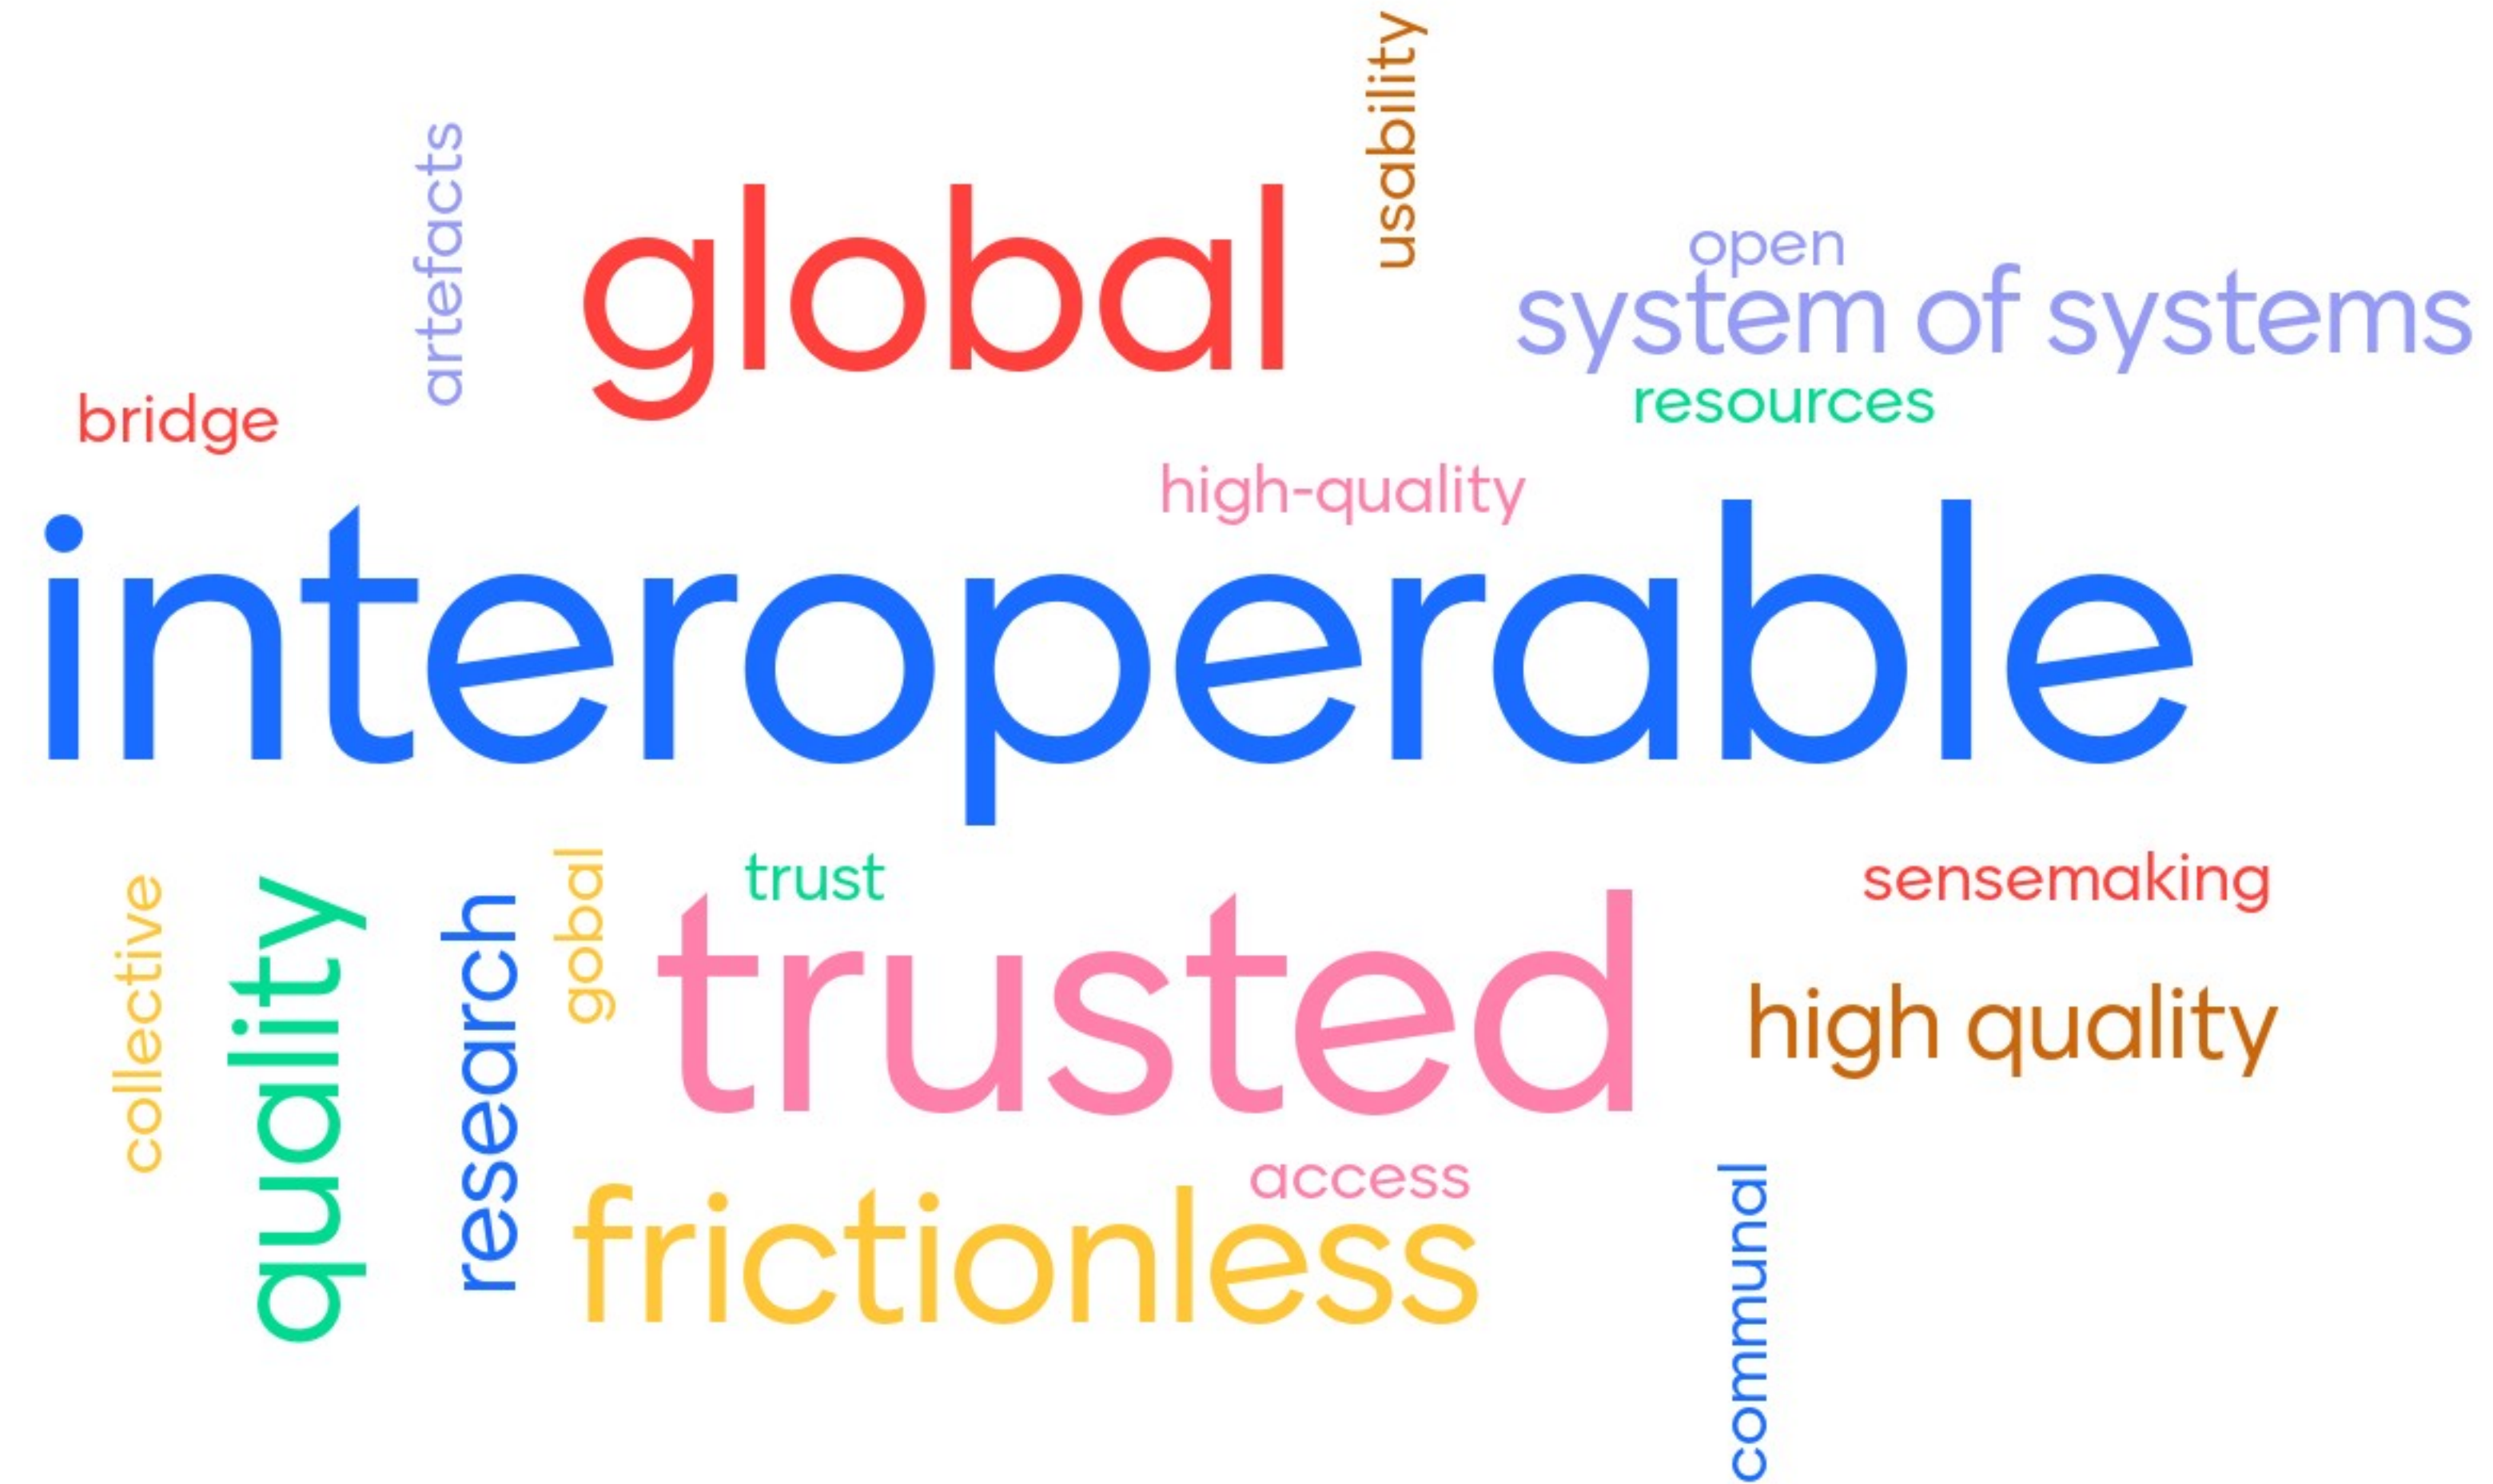

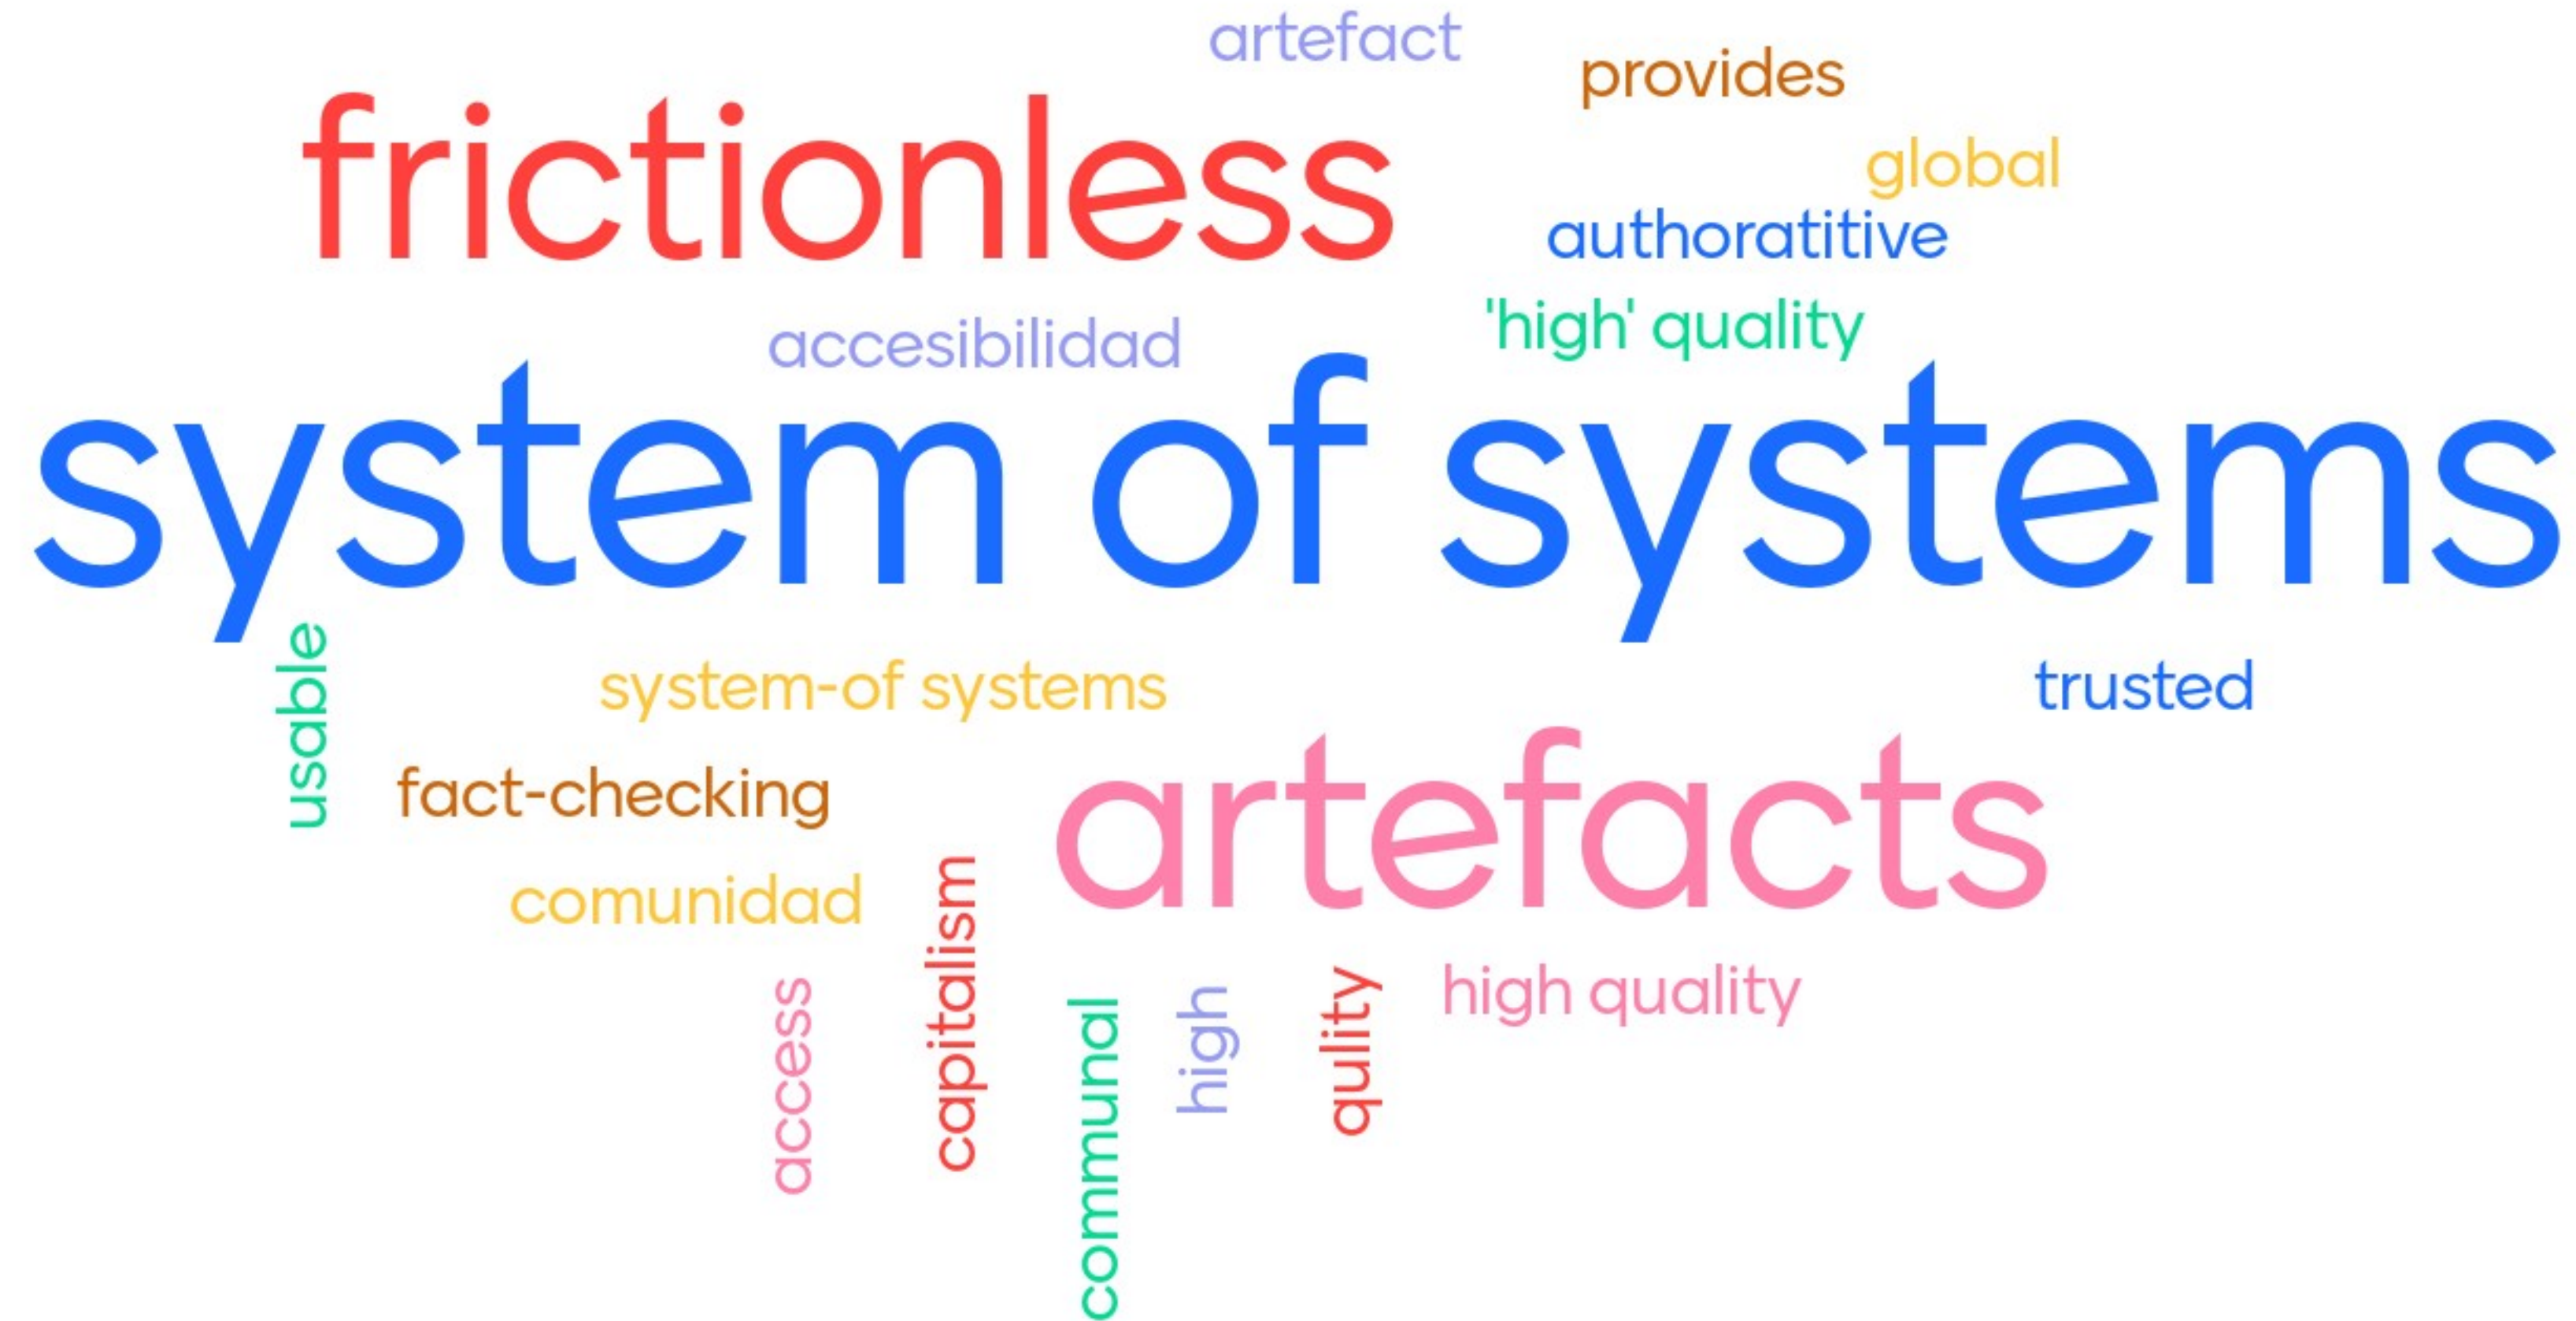

28

A global trusted system of systems that provides frictionless access to high quality interoperable resources, services and artefacts for research

What words do you like?

usability
artefacts
global
open
system of systems
bridge
resources
high-quality
interoperable
trust
sensemaking
collective
quality
gobal
research
trusted
high quality
access
frictionless
communal

26

What words make you wince?

artefact

provides

frictionless

global

authoratitive

'high' quality

accesibilidad

system of systems

usable

system-of systems

trusted

fact-checking

artefacts

comunidad

access

capitalism

communal

high

qulity

high quality

24

What is it missing?

If we use "federated" eventuallly need to look at what that word means:* coordinated services (otherwise what's the point)* interoperation (doesn't necessarily require standards -- can involve common choices like K8S)* confidence in the stds used.

High Value or Valuable (rather than high quality)

Innovation friendly. Supporting research at the edge of setting new standards

standards

something about the benefits, the added value and contributions to society and societal challenges ... though they are in the strapline

Acceso abierto con alta calidad para confiar en los datos, que provea servicios y beneficios para una comunidad específica.

Public

standards

Commons = public goods

16

What is it missing?

Public

Some data types need restricted access and open is not always accurate

seamless, community driven

inclusivity

by ...for ...

legal frameworks

Ways for anyone to connect online content snippets with relationships

16
